

Earth's Atmosphere Becoming Unstable This is Why Ancient Cultures Tracked Cosmic Cycles

[— ADAPT 2030 Video Link —](#)

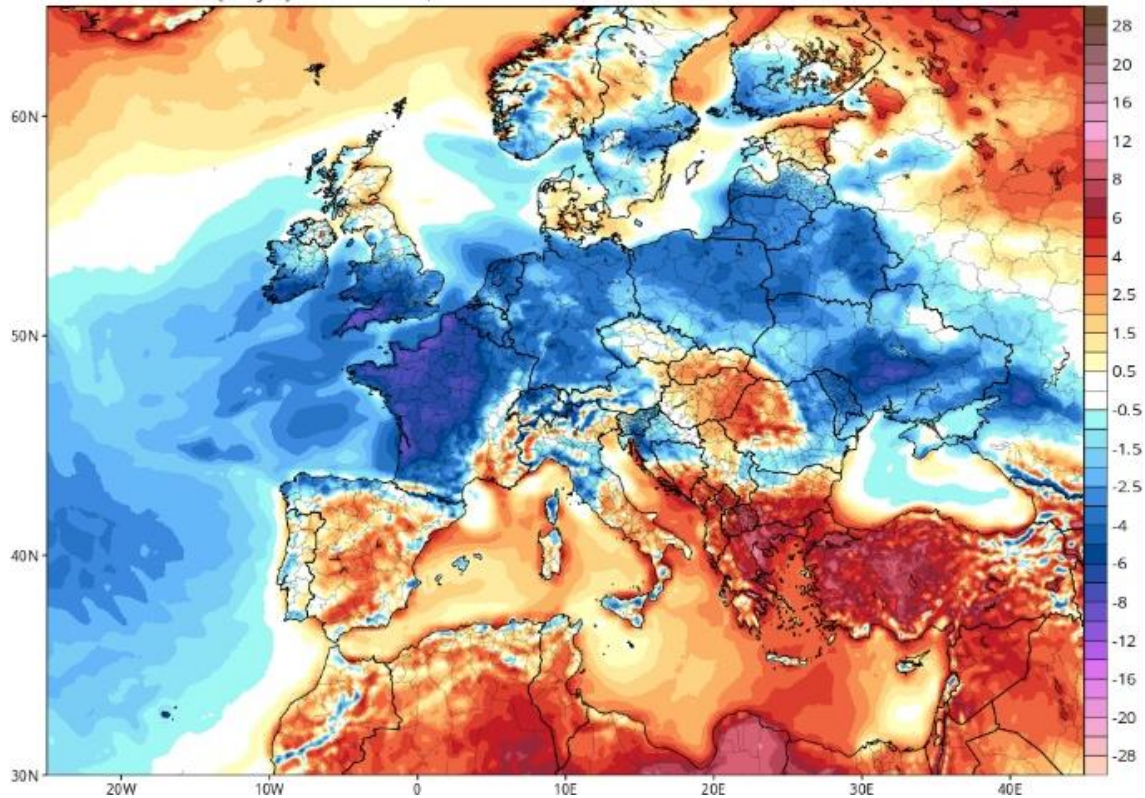

Starting here in Europe you'll see massive weather fronts moving through with 60 mile-per-hour winds and dumping heavy precipitation at the line where intense heat and cold are colliding.

A perfect example over the Adriatic for this type of event, that deep heat spot in Croatia is distinct, incredible cold (blue), and incredible heat (red). The atmosphere is smashed together with almost no space in between them. That's a perfect example of where you can start to pick out these Atmospheric Compression Events and extreme weather occurring in these areas.

GFS 2-meter Temperature Anomaly (°C) (based on CFSR 1981-2010 Climatology)
Init: 06z Nov 21 2018 [Analysis] valid at 06z Wed, Nov 21 2018

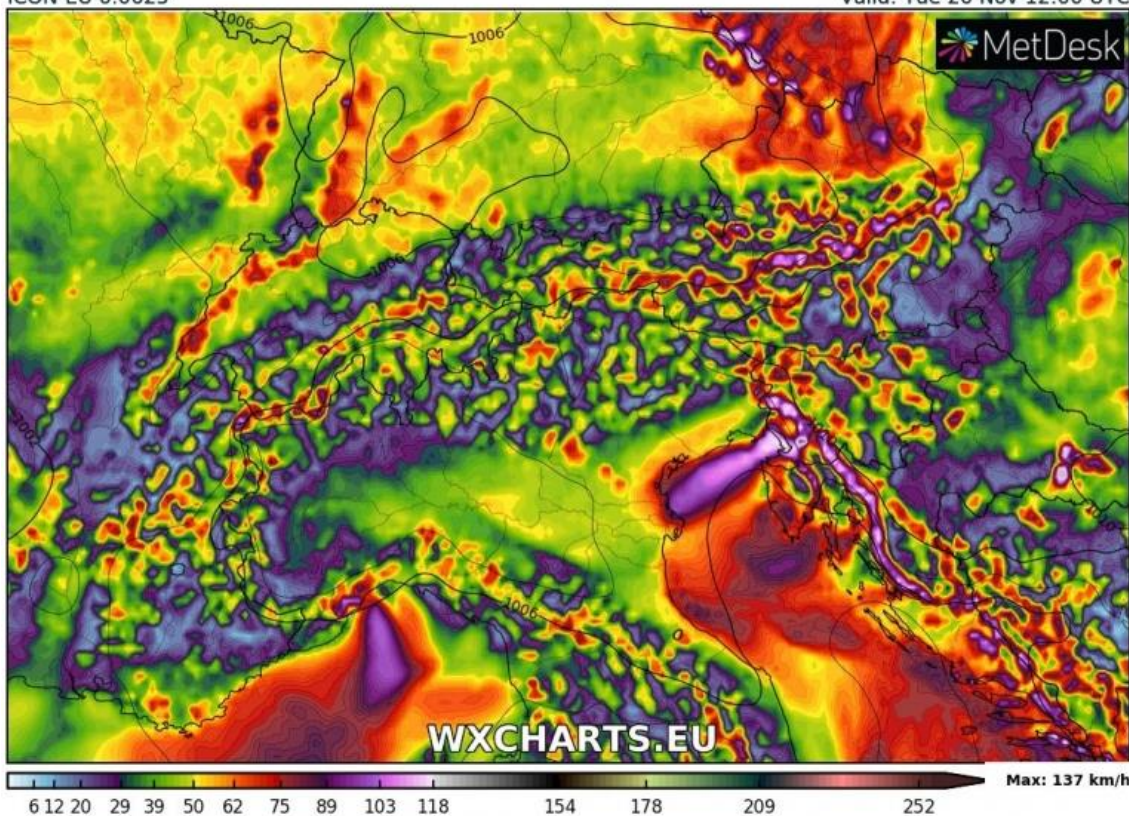

TROPICALTIDBITS.COM

(BELOW) The atmosphere is completely unstable and it breaks off into these small vortices in pockets within pockets. That striation of light pink that you see are at least 60 to 80 mile-per-hour winds. Understandably, some of this is over the Italian Alps, but it should not be going all the way down through Italy, Greece, and Turkey because they don't have that high mountain ranges going down that far. So these wind anomalies and pockets that you're seeing are extremely unusual.

Peak Wind Gust (km/h) since T+0
ICON-EU 0.0625°

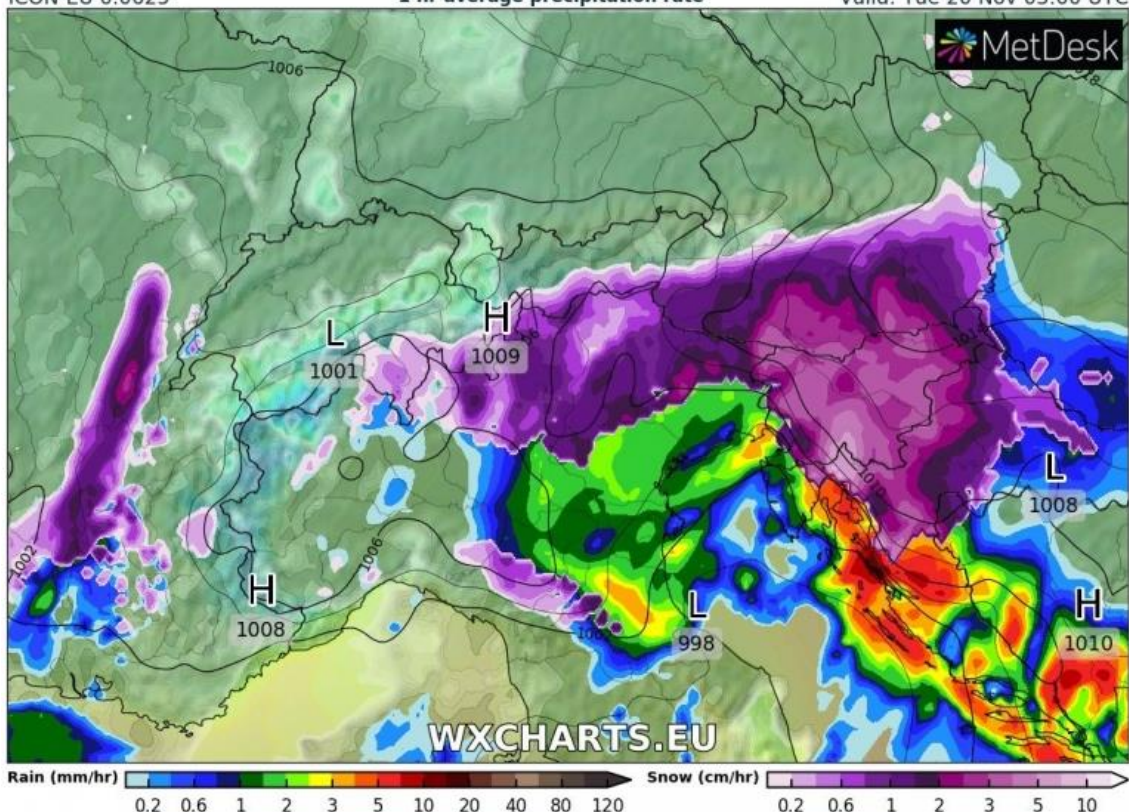

Run: Mon 19 Nov 06Z
Valid: Tue 20 Nov 12:00 UTC

Another representation here of the mix of hail, rain, sleet and snow all bunched in on each other and this very tight pocket. Different coloration is different types of precipitation, but you're getting everything in one mixed bag within just a few hundred miles.

Overview - Precip, Cloud, Temperature & Pressure
ICON-EU 0.0625°

Run: Mon 19 Nov 06Z
Valid: Tue 20 Nov 03:00 UTC

Colliding temperature extremes resulted in these massive water spouts in Italy, Greece and Turkey. This event is an EF2 tornado over water. The intensity of water spouts in the last year has really increased. Before, they were just wispy ropes coming down, but now, look at the increase over last year. As we moved forward into the intensification of the Grand Solar Minimum, you can imagine these becoming EF5 tornadoes over water by 2023.

BIG waterspout reported in Vietri sul Mare (SA), Campania, south Italy today, Nov 20! Report: Antonellino1 IG

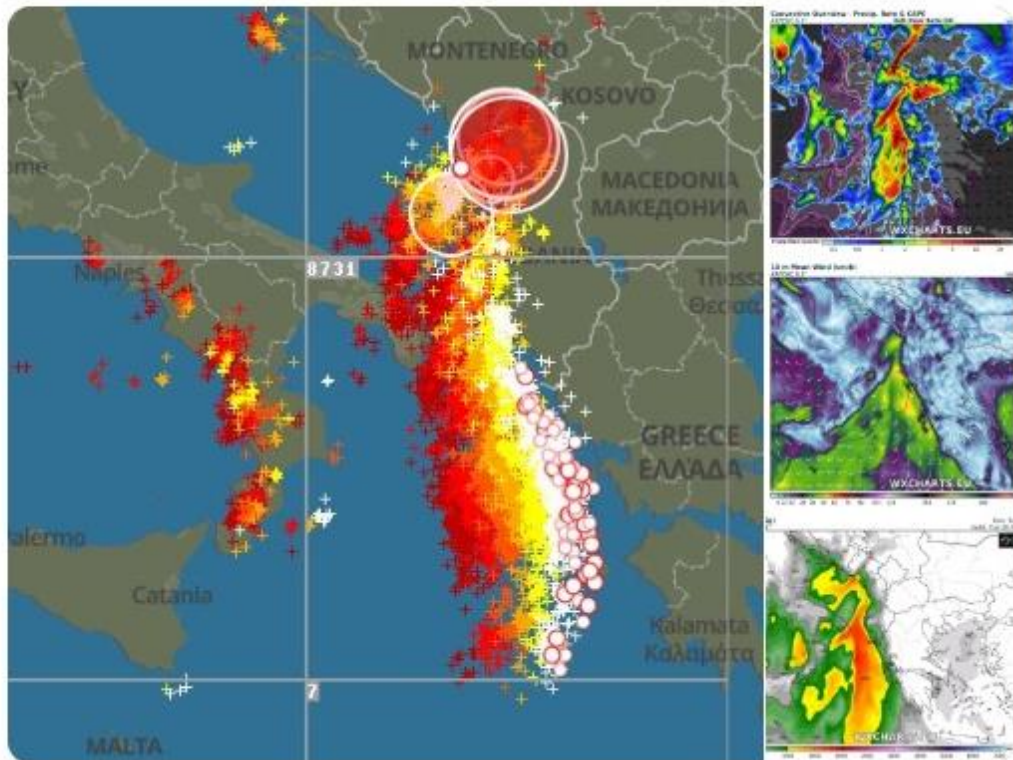

And as you look through weather charts and anomaly maps for temperature, wherever you see that gradient of below normal temperatures crushing against above normal temperatures, which seems to be the new set up for how the jet streams are moving, you're going to continue to get these Atmospheric Compression Events. There were over 200,000 lightning strikes pushing through these exact same areas.

severe-weather.EU @severeweatherEU · Nov 20

A major squall line is heading for western Greece and Albania right now. About 2000 J/kg MLCAPE and 40-50 kt DLS overlap. Expect multicells and supercells: torrential rainfall, severe wind gusts and large hail threat. Tornado threat is enhanced! Maps: [@wxcharts](#) [@Blitzortung_Org](#)

Keep in mind that this wind and weather event was a three-day event. I want to pull you back in time for a little bit to, November 18th and November 19th, 2018

Spectacular winter scenes in Anilio, Ioannina, Greece today at 1000 to 1650 m elevation. Report: Αλέξης Αναστασίου / @meteogr

This is the amount of snow that has come down in Greece in Autumn. It's at a thousand meters in altitude. That's only three thousand feet!

This is how much snow fell, a month before winter and in my opinion this is not at all normal.

Roads were closed as snow equipment was not ready to roll out yet because winter didn't begin for another month. Mornings of the 17th, 18th, 19th, and 20th just kept snowing.

WEATHER/ METEO WORLD @StormchaserUKEU · Nov 18

WOW... Gorgeous #winter and snowy scenes in Trikala, Greece yesterday morning 17th November.... Report: Meteo Gr #severeweather #snowfall #extremeweather

Taking a look into Romania, during this same exact time in November 19th, 20th, and 21st. It's looking pretty deep, and I noticed the bench there and I thought, "Yeah. I know you want to look at that." So I zoomed that in.

Spectacular winter scenes and thick fresh snow in Piatra Neamț, Romania tonight, November 19. Photo: Alex Pers Photography

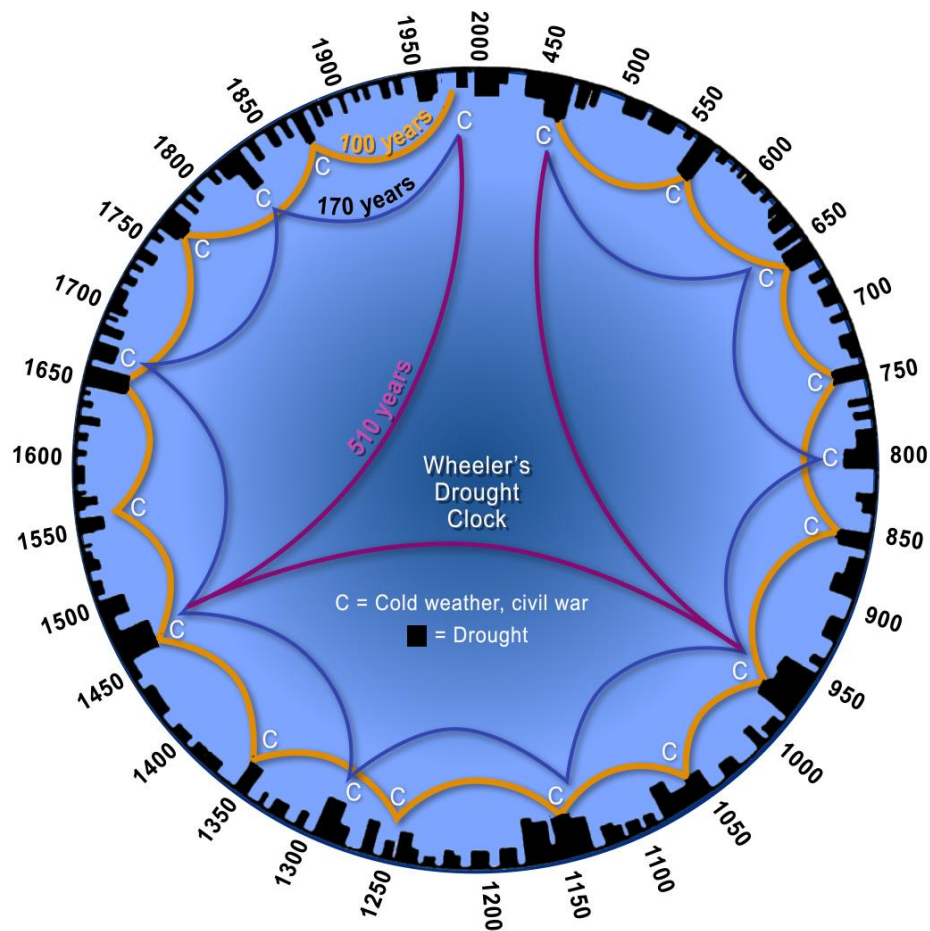

I know the media is doing the same thing that they were doing, back when it was summer and the Northern Hemisphere was getting all these record snow and cold records in summer. Corporate media was praying for Autumn to come so then they could say, "Well, it's an early Autumn event." Now the media is doing the same thing again, just hoping that inter comes so they could say, "It's an early Winter, heavy snowstorm." Not a mid-Autumn, record-breaking, all-time ever recorded snowfall in some of the snowiest countries in Europe.

Across the Adriatic over in Croatia. Take a look at the coastal here. This is a rare thing. They don't usually get this much snow along the coast. Not two feet already, and not even Winter yet. This is an outlier, so far out, that records are being broken here as well.

I want to bring you to the reason I mentioned Croatia so much. The ancients were always focused on the stars and constellations. They knew that cycles repeated and that celestial movements were the indicators as to when these cycles start again.

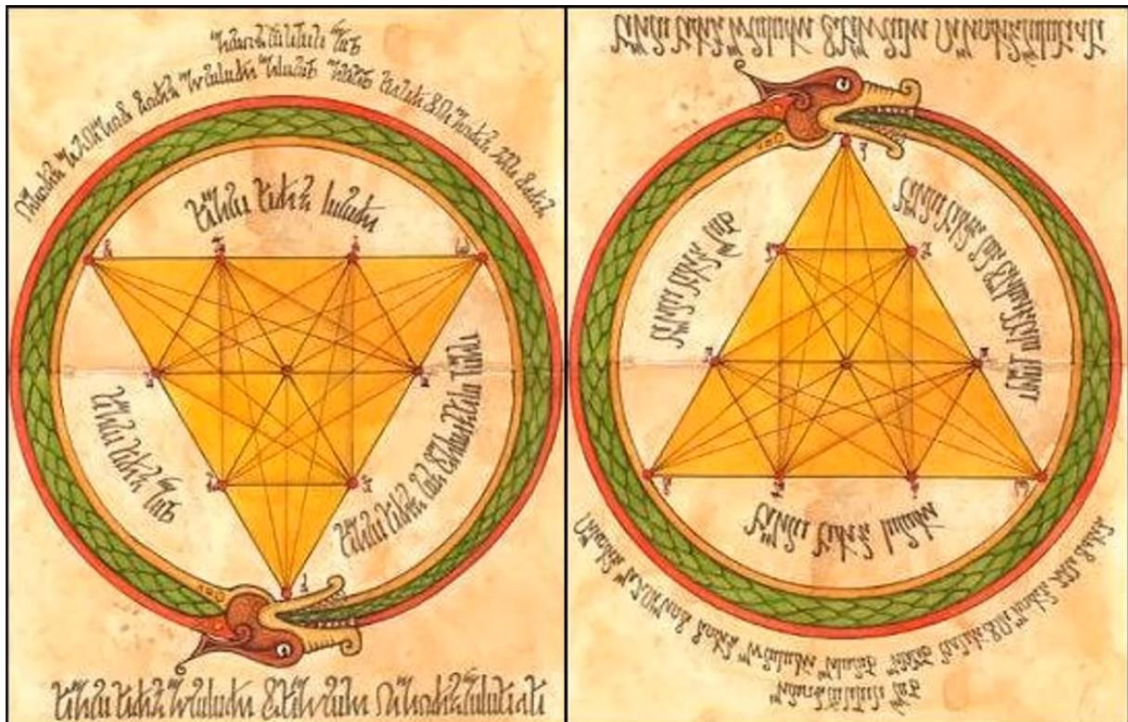

About the Sabians of Harran and how we labeled them in the 1600s & 1700s. We would have called them witches and warlocks because they were the Keepers of Time. They understood astronomy, they were the warlocks.

The Earth was purged of anybody with this type of information, by the Catholic Church for over 300 years. Sabians would have had to hide underground, literally, with their teachings and with their symbology. It would have become a secret type of initiation, because if you were an insider and turned them in, they were burned at the stake. They, were the true keepers of time.

You need to keep this in mind as we go past this current civilization, even back to five or six thousand years, we need to look prior to that.

I'm going to bring you over here to Zagreb, Croatia right on the line where they're getting thunderstorms, yet literally a hundred miles or less away, they're getting two feet of snow down on the Adriatic. Incredible amounts of electrical activity in the atmosphere.

Deep fresh snow in Ogulin, Croatia yesterday morning, Nov 20th. Report: Dejan Topić

Ogulin is about half way down to the coast from Zagreb, I remember this name, because this is one of the areas that I want to visit in my travels to Croatia. Not only is this area termed and known for the “Witches of Klek”, but they also have an array of iconography and different ethnographic collections, the wooden spears on the right.

Ogulin is also known for **witches of Klek**. This mountain so inspired folk imagination that the locals created numerous ghoulish tales and legends about it. In the 17th century – the legend about the witches of Klek was first written down. This legend says that witches, fairies, and elves from all around the world gather in Klek during stormy nights. As they dance there their cries can be heard as far as Ogulin.

I noticed the similarity right away because in my personal research I have been studying what is termed as the “protector weapons” or “Protector Spears of Buda”, to keep the Earth and us as humans in our civilization, from going extinct. There are 36 sticks in the Daoist temples, and if you line them up correctly, it shows the difference between more highly charged Birkeland Currents to our star and our Solar System; and more pinched currents that make our Sun to go into a lower activity state. It's all spelled out in the myths and religions of our world as to how our star operates and how our civilizations ebb and flow. You're seeing the same thing right here in Ogulin, you even see some of the Zeta pinch and the plasma flows.

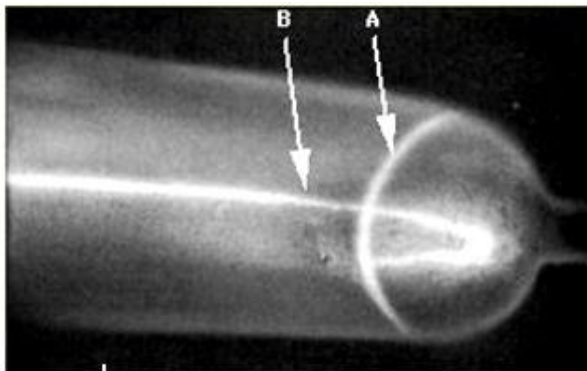

Ogulin, Croatia Ethnographic Collection

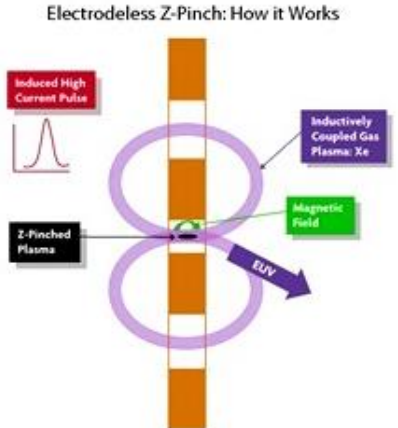

Taipei, Taiwan Daoist Temple Protector Spears

I lined these up so you'll be able to see the representations of plasma inside the Daoist temples.

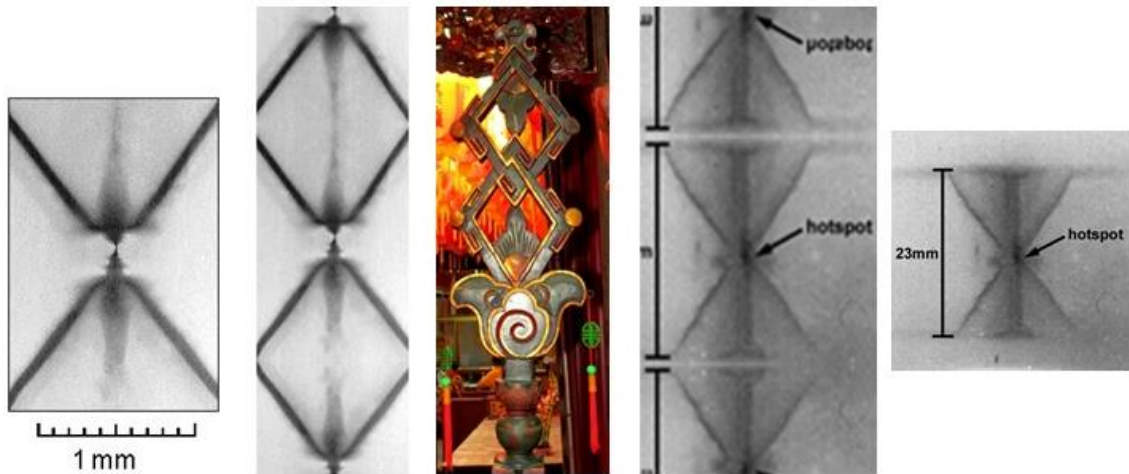

The point where arrow A is pointing, the magnetic field starts contracting.

The Hourglass Nebula offers a useful demonstration of the discharge configuration under discussion.

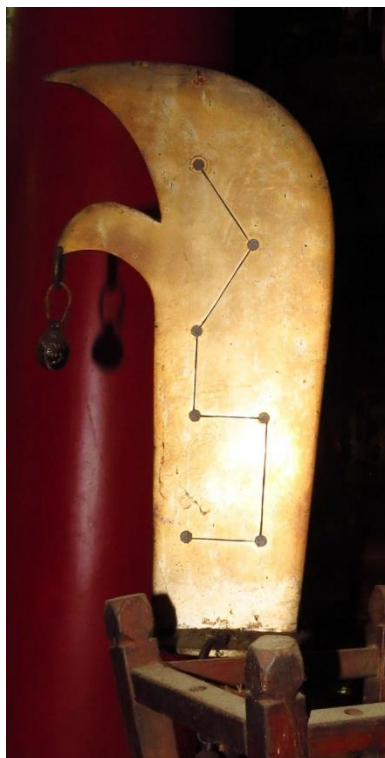

I just went through a few more of these and I'm getting together the full 36 collection so it maps out. I'm going to create a story with the sticks.

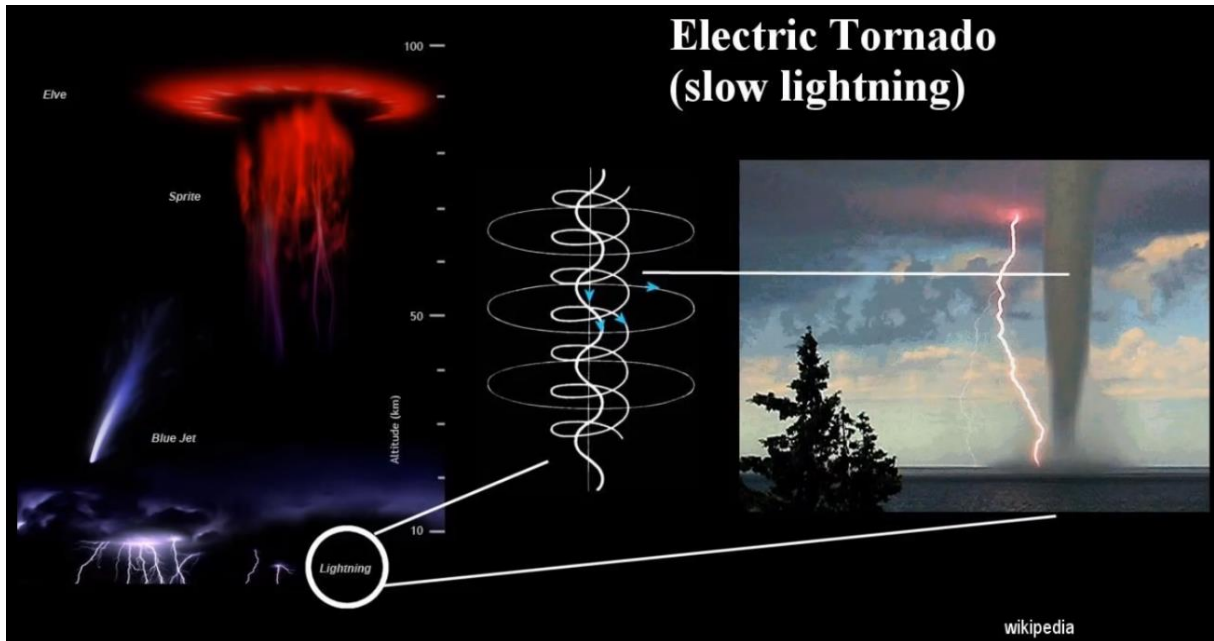

Zeta Pinch (Z-Pinch) Plasma Laboratory Experiments

We're talking about Zeta pinches and they have at the very center of Daoism the BeiDouQiXing which means the Big Dipper Cult. Japan follows the same, Korea follows the same, it's something about where our Pole Star is, and how the Big Dipper is rotating around the Pole Star, which indicates the shift in global weather. This in turn dictates how much food we can grow, how many people can stay alive on the planet, and how the civilization is going to move forward over these multi-century, multi-millennial cycles.

They call it a contraction as well, an expansion and contraction. That is exactly what we are facing at the moment, Grand Solar Minimum crop losses, a contraction in output.

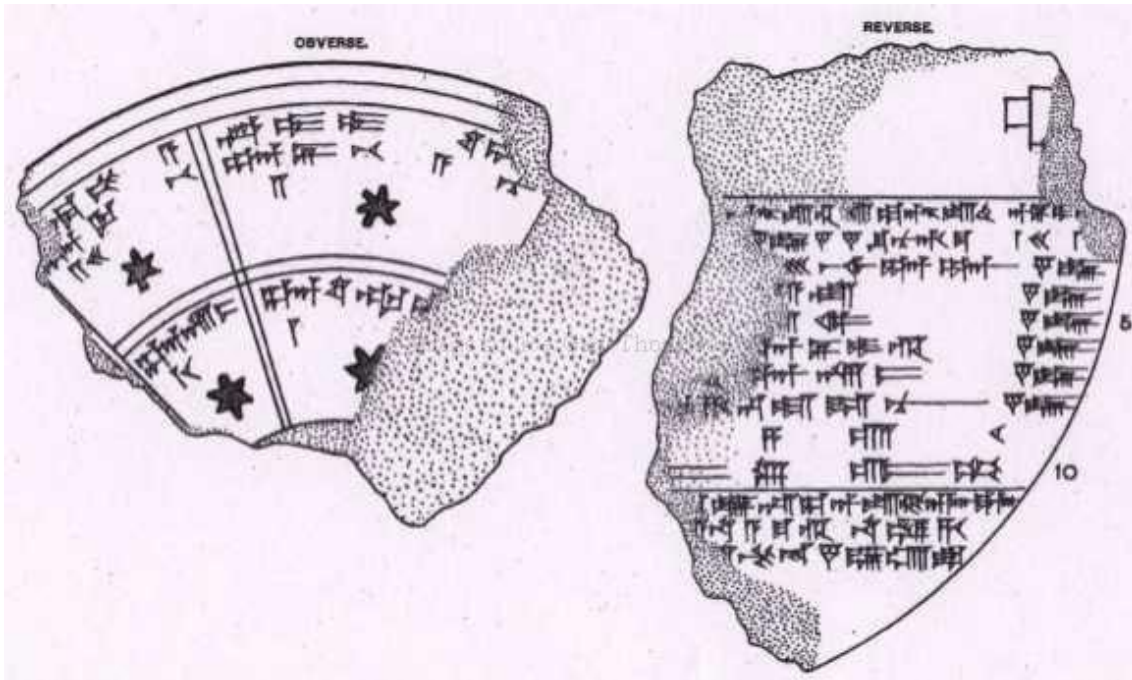

I want to bring you in here and see if you spot any similarities in these ethnographies in Croatia. There are apparently more of these, I don't know exactly if there's 36, but this is only a partial representation of the entire collection. If I can match this over what they have in Croatia, which has an ancient culture, then it's no coincidence.

These are passed down, these iconographies, and if they matched up with what exists over here in Asia, then that's not a coincidence, that's mapping and following cycles going back tens of thousands of years.

As we know, back into Babylon and Sumeria, astrology and mapping of stars was at the highest apex of the mysteries, it was the center of the center of the civilization. Knowing how the stars moved and how our planet was affected by this. There is no mistake, this is the same information being shared by ancient cultures that was passed down and by those who survived the last cataclysms. This is left for us to try to piece together again, literally.

Now, taking a look at the present-day town of Ogulin, you have to think several millennia back. They set themselves up in a fertile valley with two rivers.

The town of Ogulin is positioned in the very center of mainland Croatia, just between Zagreb and Rijeka. It was founded in a large valley formed by two rivers : Dobra and Zagorska Mrežnica.

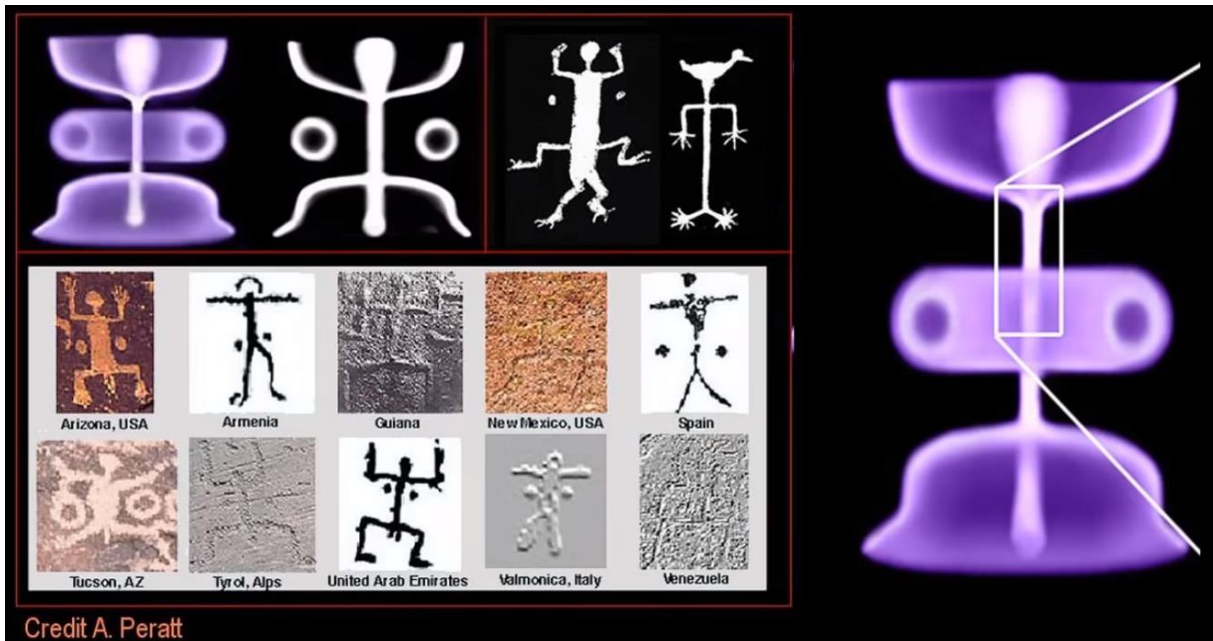

Not only that. There are underground cave systems directly under the town. In that past it's been talked about populations fled underground as bombardment from space, plasma events, and electric geology began.

The town of Ogulin is positioned in the very center of mainland Croatia, just between Zagreb and Rijeka. It was founded in a large valley formed by two rivers : Dobra and Zagorska Mrežnica.

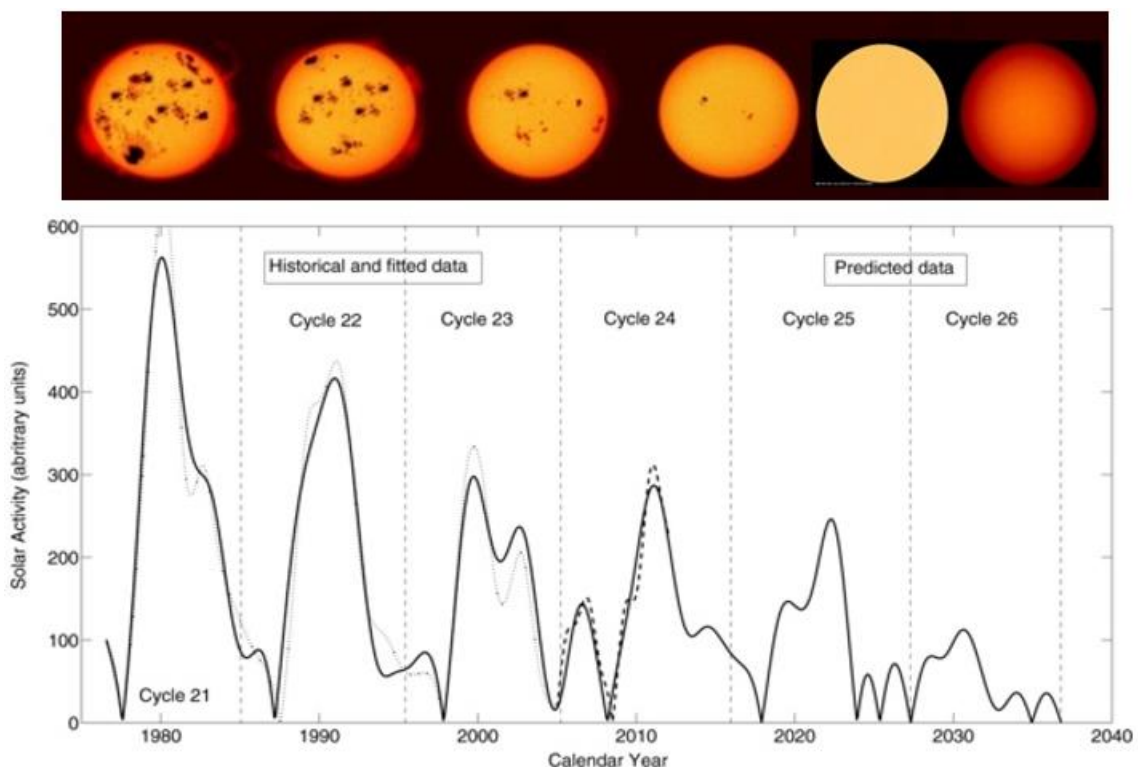

All these underground cities were there for a reason, and when I say cavern system, this thing stretches miles under the earth.

It's a perfect way to survive celestial bombardment above on the surface. The keepers of time. They've been watching cycles come and go.

We're coming to the end of an age right now. We're beginning this cycle into the next Grand Solar Minimum. So perhaps we should take heed, or at least study, or think about what were they pointing to with the cycles that they were looking at.

Something large is at our doorstep. We need to prepare for decreased crop yields across the planet. Literally, the amount of food that we can produce and grow to feed everybody, all eight billion people by 2025. We are not going to have enough.
