

## Arctic Methane Release & 50% Crop Losses in Western Australia

[— ADAPT 2030 Video Link —](#)

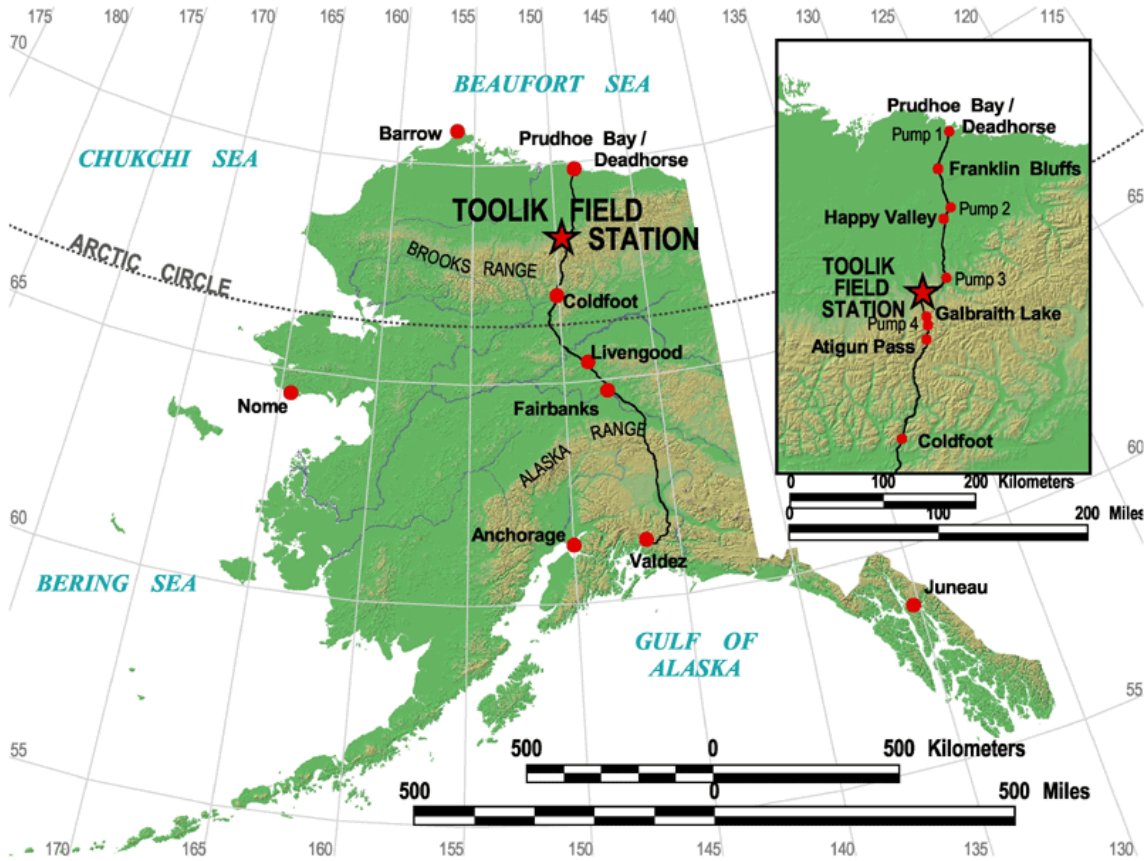

Deflection through scary headlines: **Across the Arctic lakes are leaking dangerous greenhouse gases.** I think you've lost the fear that they need to re-scare you with "Greenhouse gases are dangerous; I've never seen a lake like this one!" They've been studying over 300 of these lakes and they only saw one, so far. Should we be extra, extra, extra scared?

## Across the Arctic, lakes are leaking dangerous greenhouse gases

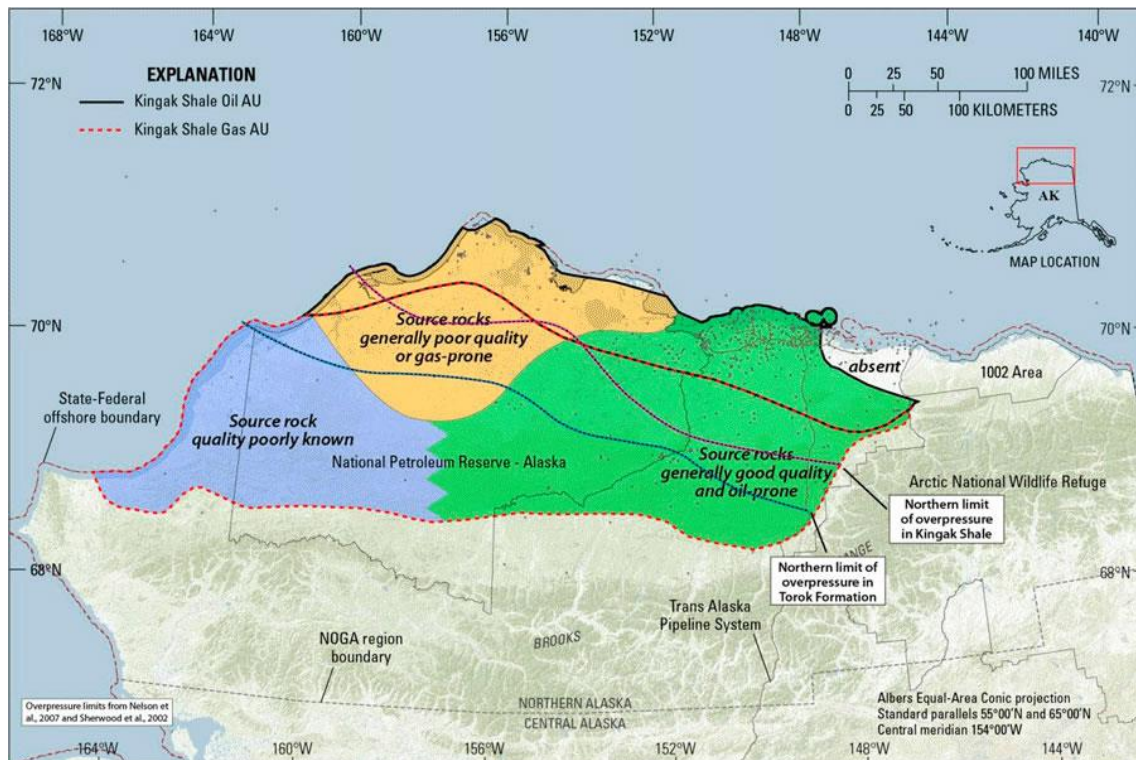

**Alaska:** Katey Walter Anthony has studied about 300 lakes across the tundras of the Arctic. But sitting on the mucky shore of her latest discovery, the Arctic expert said she'd **never seen a lake like this one.**

The area where they found the lake? North Slope Brooks Range, an oil producing area of Alaska. Shocker, they found methane seep coming out of a lake in an oil-producing area!

Not only do they have oil and natural gas, they also have shale. The lake is in the green shaded area in the image.

Scarier headlines: sounded devices picked up huge holes at the bottom of the lake. You can actually see where the methane seep is coming out. It's that milky-colored bubbling mass near the shore. But when they examined samples, they found them to be of geologic origin, meaning, an oil field.

**The Sydney Morning Herald**

## Across the Arctic, lakes are leaking dangerous greenhouse gases

Her sounding devices picked up huge holes in the bottom of the lake. Pockmarks, she called them, "unlike anything I've ever seen in any Arctic lake".

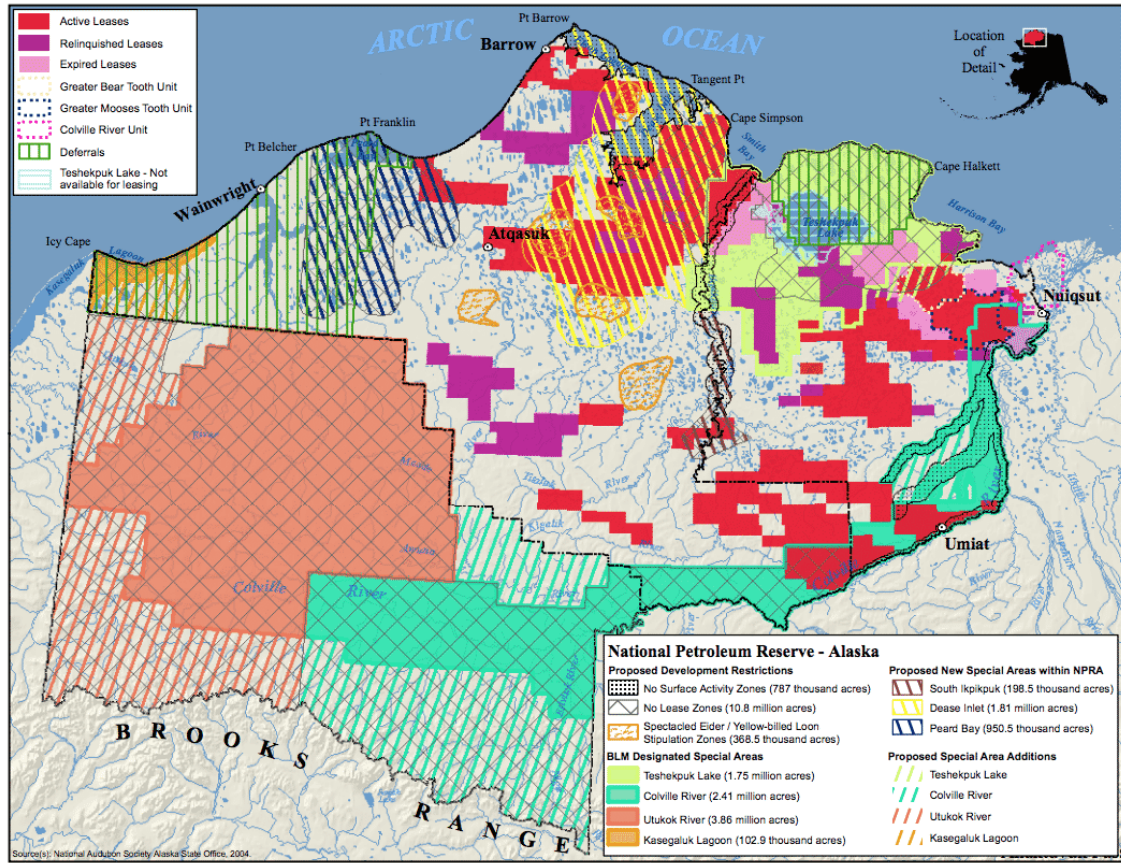

The next discovery came from the lab. When the scientists examined samples of the gases, they found the chemical signature of a "geologic" origin. In other words, the methane venting from the lake seemed to be emerging not from the direct thawing of frozen Arctic soil, or permafrost, but rather from a reservoir of far older fossil fuels.

How is this even making headlines? These are the oil seeps. How are they going to try to spin an oil seep in the lake that they found where methane was coming up? How does this even make headlines as a climate change article?

On to *Sydney Morning Herald*, they somehow dropped the ball on record-breaking cold in Western Australia destroying crops. Yes, that's ice on the wheat. From expecting to have a bumper crop compared to eastern Australia which is decimated from drought, we're looking for at least 50% losses in wheat in Western Australia.

## Frost damage dashes farmers' hopes of record harvest, as Perth shivers through chilly night

NEWS

A record-breaking cold spell in Western Australia's agricultural heartland has shattered farmers' hopes of enjoying a bumper crop harvest.

Areas in Newdegate, experienced the lowest temperature ever recorded. Farmers are reporting 100% frost coverage; it was a complete whiteout across the fields. The image shows what the produce looks like.

NEWS

Temperatures in the southern Wheatbelt dipped between 0 and minus 5 degrees Celsius on both Saturday and Sunday morning, while the Great Southern town of **Newdegate recorded its lowest-ever temperature** of minus 4.3 degrees.

"It wasn't like the shadows were just frosted, it was a complete white out."

Somehow, ***Sydney Morning Herald*** is focused on methane to keep you scared. They've not even reported on their own massive local crop losses.

On to **9NEWS**, Southern Australia reporting it's coldest morning in more than 50 years and coldest September morning in 23 years, at MINUS 1 degree Celsius!

**9NEWS**

## Temperatures plunge up to 10 degrees below average across Australia's south

Walpeup in the Victorian Mallee had its coldest September morning in 23 years and **coldest morning this late in the year in more than 50 years of records**, recording a minimum of -0.8 degrees.

Canberra didn't escape the frost, **hitting a low of -1**. Temperatures will climb as high as 15 as the day progresses.

Perth's had its coldest September morning, since 2008. Wait a second, we should be heating in the winter? These are the things that IPCC doesn't want you to put two and two together or to even ask questions about.

9 NEWS

In Perth, temperatures fell to 2.8 degrees on Sunday morning, the coldest September low since 2015.

Jandakot temperatures slumped to 1.9 degrees, while the mercury reached just 1.6 degrees in the Swan Valley.

Perth's coldest ever September day was in 2008, when the temperature plunged to 1 degree.

For potato growers, 90% of current potato crops are impacted.

More on wheat from **ELERCTROVERSE**, farmers up at Bruce Rock said that “50% of the wheat is stuffed”. Stuffed is another way of saying, shattered or broken.

### WESTERN AUSTRALIA: CROPS PUNISHED BY TWO DEVASTATING FROSTS IN A MATTER OF DAYS

📅 SEPTEMBER 20, 2018 📍 CAP ALLON

Crops in Western Australia were punished with yet another severe frost overnight Wednesday, following a devastating hit on the weekend at a critical time in development.

John Chapman, a farmer in Bruce Rock, tweeted that **50% of his wheat crop is “stuffed,”** adding that this was the, “biggest frost I have seen in my short 15 year history.”

It's not just wheat that is affected, also barley, and all the grain crops that we keep talking about. These yields are going to continue lower and prices are going to continue to go up. You can see why the *Sydney Morning Herald* is deflecting this with the Arctic methane. They don't want you to see the crop losses.

That is a nice thick frost damaging and killing whatever's growing there in the fields. Those heads are not going to come back and be edible.

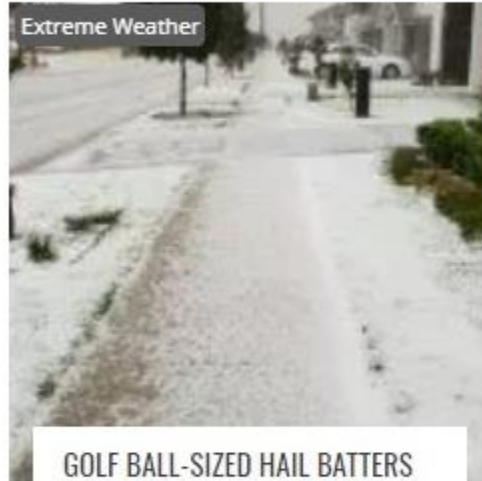

A new article coming across the wire off **ELECTROVERSE**, a golf ball-sized hail batters Sydney, leaving a blanket of snow.
