

How They Deceive You by Using Numbers

[— ADAPT 2030 Video Link —](#)

Global temperature updates are going to be on hold until NOAA gets back up and running again in the future after the debacle and the locking of horns between the Democrats and the Republicans is sorted out.

Government Shutdown Delays UAH Global Temperature Update

January 1st, 2019

NOAA Satellite and Information Service
National Environmental Satellite, Data, and Information Service (NESDIS)

Government Shutdown Redirect

The NOAA CLASS system we obtain our satellite orbit files (raw data) from has been taken offline until the government shutdown ends. As a result, our UAH monthly global temperature update is delayed.

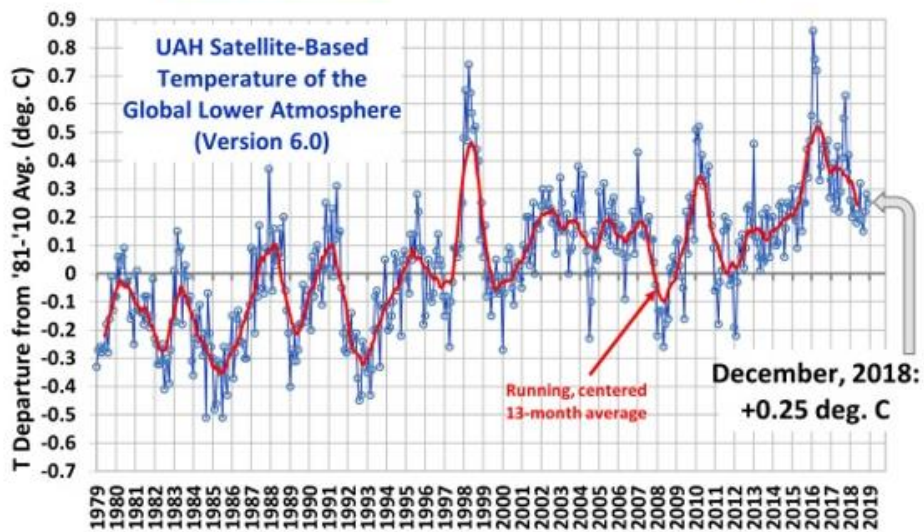

Nevertheless, Dr. Roy Spencer was able to get the December 2018 temperatures before the shutdown, and it showed a drop from November temperatures. The corporate media however, would have you believe it's in a hot house at that moment which continued all through Christmas. 2018 even ended up the 6th warmest year, globally, in the last 40 years.

UAH Global Temperature Update for December 2018:

+0.25 deg. C

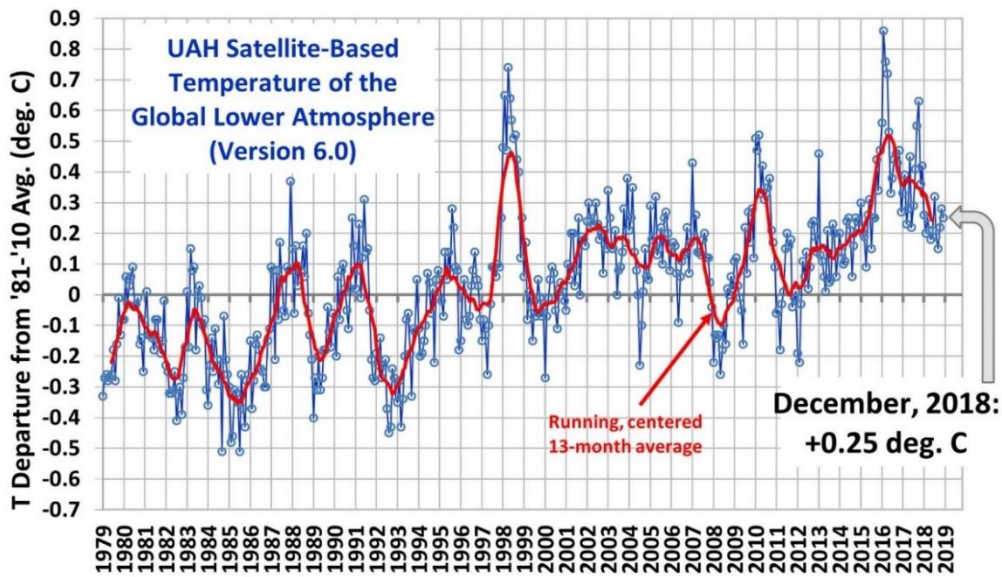

2018 was **6th Warmest** Year Globally of Last 40 Years

So we were told to believe that November, 2018 and December, 2018 were the warmest ever, but a closer look at the Satellite Era Temperature data from 1979 to 2019 image above shows something different.

[Click Here to Learn More](#)

It turned out that even with an El Nino starting, only a quarter of a degree above the baseline were observed in 40 years, meaning 0.25C above the satellite era average.

Dr. Spencer summarized the full Global Temperature Data as shown in the table below with columns labeled Global, Northern Hemisphere, Southern Hemisphere, Tropics, lower USA 48, Arctic and Australia. Comparing 2017-2018 for the month of December shows that global temperatures were down from a year ago.

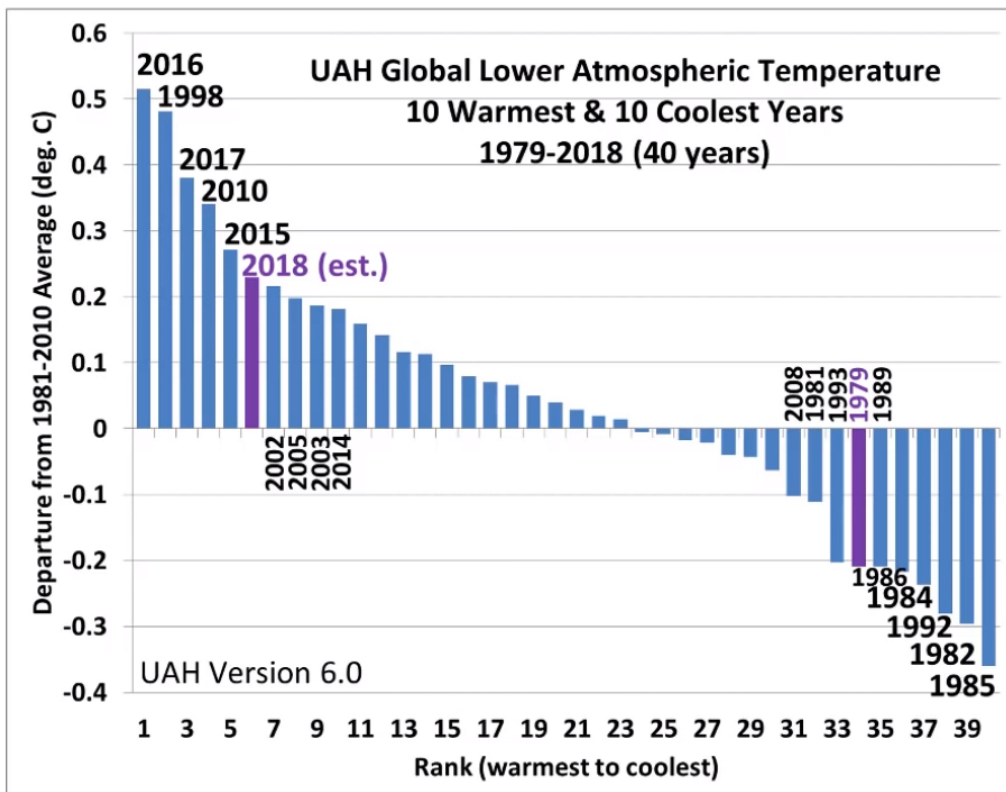

UAH Global Temperature Update for December 2018:

2018 was **6th Warmest** Year Globally of Last 40 Years

Various regional LT departures from the 30-year (1981-2010) average for the last 24 months are:

YEAR	MO	GLOBE	NHEM.	SHEM.	TROPIC	USA48	ARCTIC	AUST
2017	12	+0.42	+0.50	+0.33	+0.26	+0.45	+1.37	+0.36
2018	12	+0.25	+0.32	+0.19	+0.32	+0.20	+0.65	+1.19

We've been told by the IPCC as well as the corporate media that it's going to be warmer and warmer and that 2018 is going to be the hottest ever. In reality though, it's only the 6th warmest year. I guess participation trophies should be all around, because 2016 was the apex and since that time global temperatures have been decreasing. This is what happens during the Grand Solar Minimum intensification. his event is expected to cool the planet and with all these volcanic eruptions going on in the equatorial bands, you can expect global temperatures to drop even further.

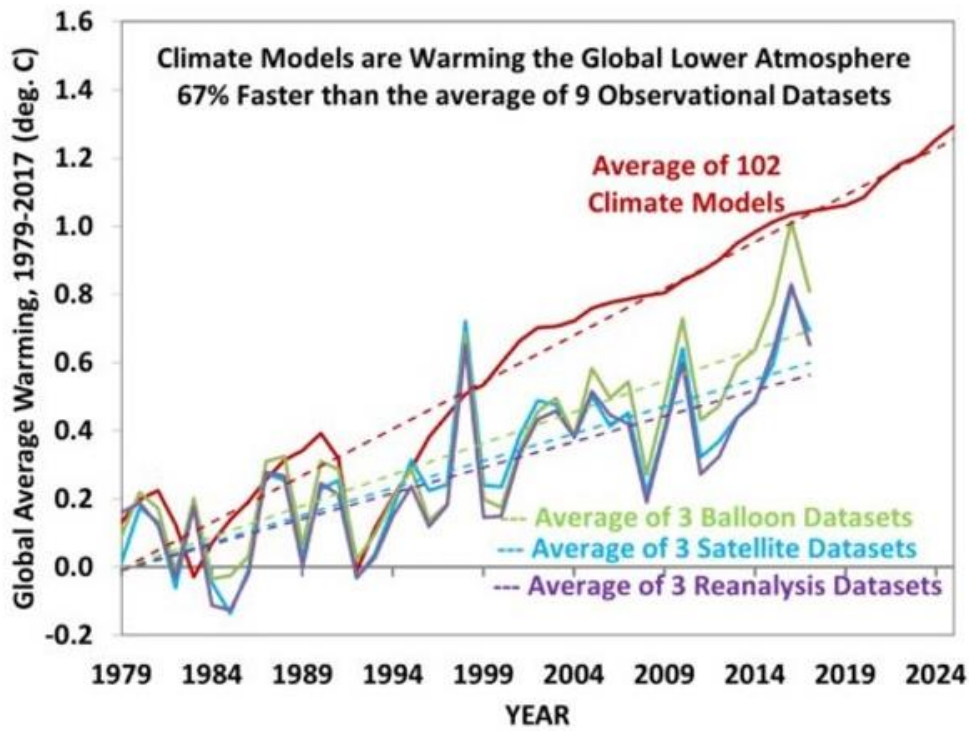

I assure you the IPCC is taking orders and directives from elsewhere. Once you look behind the door of reality, you'll see who is behind, pulling the strings and giving the orders to keep you unprepared for these changes.

The call is at hand; the collective human mind is becoming too powerful at the moment for the elite to control. Notice the runs on the banks planned for France and the nationalist movements sweeping across the planet. You are definitely on your own.

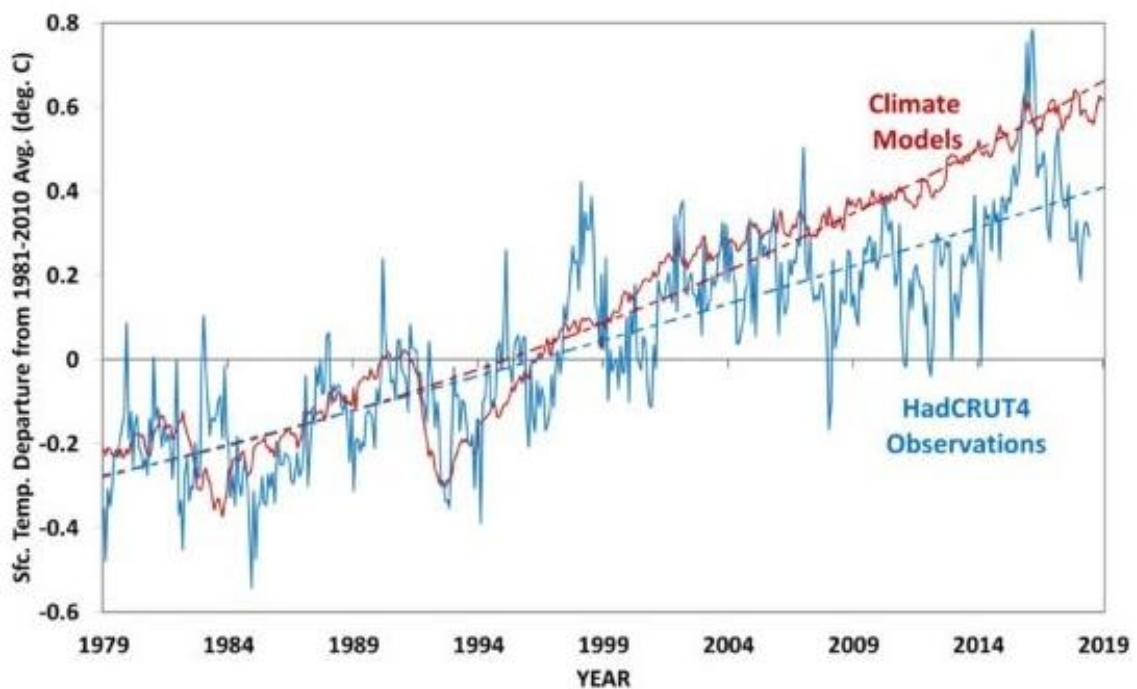

We can see now how climate models that never matched reality. You should have realized by now that the IPCC will never match what's happening in the real world, because it's never meant to. This is a smoke and mirrors game, only those who can see through the fog and only those who can find truth through the illusion are the ones meant to step into the next world.

Deviations from global average surface warming are absolutely manufactured as a test for the mind. My personal opinion on this matter, you have less than two years left to prepare.

IPCC Climate Model Projections of Global Average Surface Warming are Increasingly Diverging from the Observations

Looking at what's happening over in Lebanon with the snows. I know that it snows in Lebanon every year, but not multiple feet like this. There are blizzards raging and massive flash flooding in Lebanon. Towns were buried and cut off due to excessive snows and floods.

Over to Canada, amazing sun pillars due to extreme cold @-40C ice crystals suspended in in the air. Nature's light beacon.

And to leave you with little humor, here's a snow rabbit over in Europe. I wonder what kind of art could you create with snow on your trees, cars and houses.

Thanks for reading. I hope you got something out of the article. If you are looking for more in-depth analysis on these exact same issues, Mini Ice Age Conversations tri-weekly podcast, 30-minute on the go anywhere you can find a podcast hosted across the net.
