

Food Recalls to Mask Global Crop Losses and Reduce Demand

[— ADAPT 2030 Video Link —](#)

Starting here **Cereal Maker Faces Class Action Over Herbicides Found in Products**. Report is talking about round-up being found in oats. We've noticed this targeting of extremely organic healthy producers of our foodstuffs, as well as around the planet Salmonella, eggs on lettuce, pork is contaminated, this, that and the other. And now, we have our cereals and grains being contaminated. I really believe that this is trying to reduce consumption or demand in agricultural products that are showing losses and stresses with reduced yields.

Cereal Maker Faces Class Action Over Herbicide Found in Products

SAN FRANCISCO (CN) – Bob’s Red Mill Natural Foods conceals the presence of an allegedly carcinogenic weed killer in its steel cut oats and rolled oats, and instead capitalizes on consumer demand for “wholesome” food by falsely advertising the products as healthy, two people claim in a federal class action filed in San Francisco on Friday.

Taking a look at the farms in Ireland, harvest will be down by 27% this year, 1.75 million tons, compared to 2.35 last year.

FARM IRELAND

Thursday 25 October 2018

Harvest yields will be down by 600,000t predict Teagasc

Grain output forecast to fall 27pc

Overall grain output this harvest will be back 27pc or almost 600,000 tonnes, a Teagasc survey has forecast.

The Teagasc crop analysis estimates that this year’s harvest will produce 1.75m tonnes of barley, wheat and oats. This is back substantially from the 2.35m tonnes harvested in 2017.

What they're talking about specifically is, oats being pulled back, half a ton per acre in yield. We've seen that in Canada and other places out there growing oats show reductions in yields. Guess what, Red Mill, That previous story was all about oats. Coincidental, isn't it?

FARM IRELAND

Thursday 25 October 2018

Harvest yields will be down by 600,000t predict Teagasc

Grain output forecast to fall 27pc

He attributed the fall-off in yields to a combination of drought, poor sowing conditions this spring, and an 11pc contraction in the area sown to cereal crops for the 2018 harvest.

Yields from winter barley have been back around 0.5t/ac this harvest at an average of 3.5t/ac. Similarly, yields of winter oats are also back 0.5t/ac to 3.0t/ac on average.

Mr Hennessy said overall output reductions of this year's magnitude had not been seen since the poor harvests of 1993, 1994 and 1995.

Further in the article, they indicated that it's failing to make benchmark on minimum tonnage per acre. Serious problem up in Wales, Scotland, Ireland, in England. They're also down on wheat harvest.

FARM IRELAND

Thursday 25 October 2018

Harvest yields will be down by 600,000t predict Teagasc

Grain output forecast to fall 27pc

The winter oats harvest is progressing, with crop yields varying between 2.7t/ac and 3.2t/ac. While most crops are averaging over 3.0t/ac in south Tipperary and bushelling at 54-55kph, yields are failing to make the 3.0t/ac average in the midlands.

Quick dive into the oat prices in the **Chicago Mercantile Exchange**. Finding rye futures? You're going to have to head over to Europe for that.

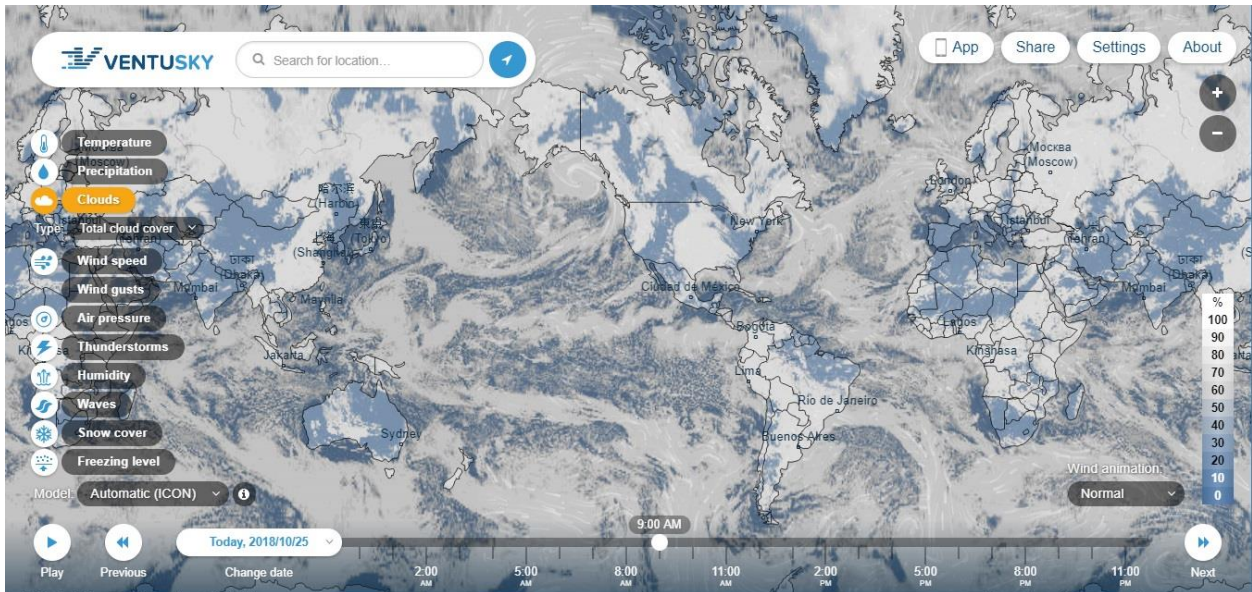

Why would I talk about rye? When we're looking at year upon year losses, this is gargantuan! This is about the biggest you're going to find so far around the planet, but expect this for everything grains moving forward. Rye: 2016, 2017, 2018, down in 2019 too. If you look at 2014-15, it was 2 million metric tons. Remember these thousands are in millions, so a thousand- thousand is a million. Then it dropped down to 1.6 million, and now it's 1.2 and then going into this year and next, it is predicted to be only, not even a million metric tons. Look forward to anything that you consume made of rye to skyrocket in price.

Over to **VENTUSKY**, somebody sent me a link and asked me to look at the cloud covering across the planet. I wanted to share this with you. I'll pose the question to you. I wonder, does it have anything to do with galactic cosmic rays and our weakening magnetosphere the increased cloud cover?

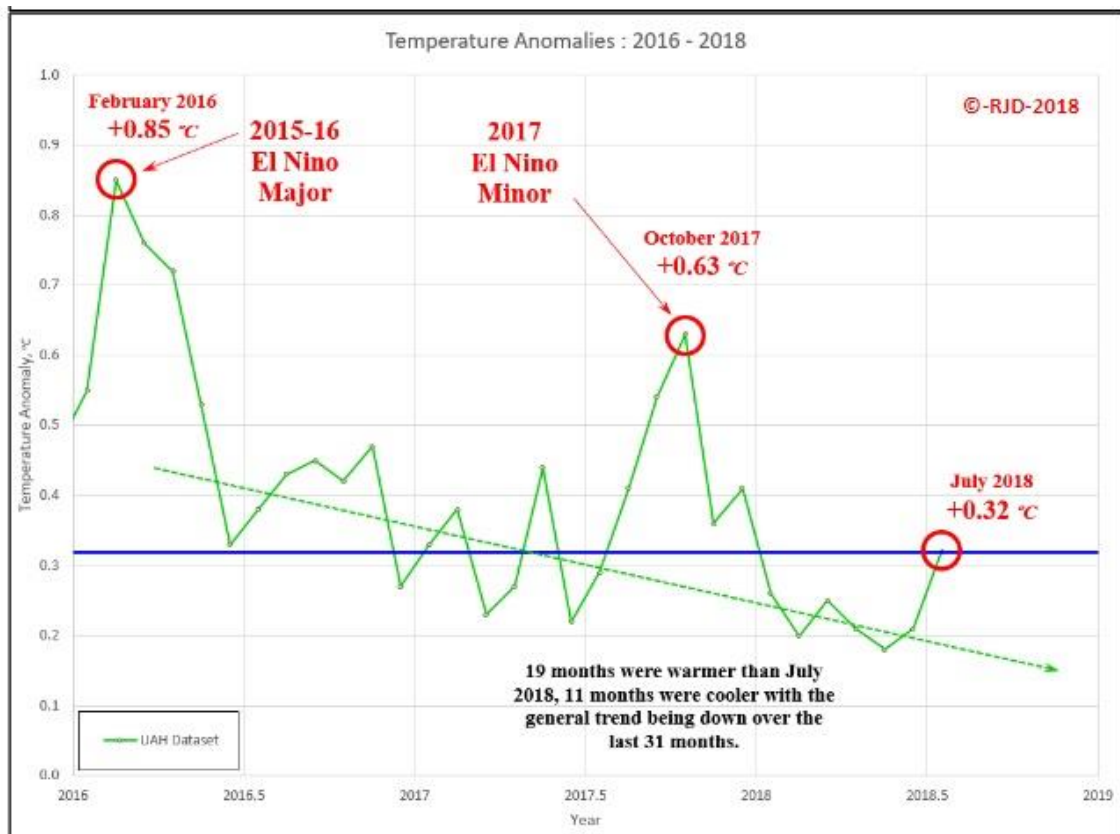

Also from **AN OPEN LETTER TO THE WORLD on CLIMATE CHANGE**,
from Ronald Davidson.

AN OPEN LETTER TO THE WORLD ON CLIMATE CHANGE
RONALD DAVISON (P.ENG.) AUGUST 2018

Very few people who read this will know who I am or what type of person I am. I've had a successful engineering career, I believe I'm well liked and I've conducted my life honestly. I am not normally outspoken but I've had a long time to look at "Global Warming" and I just felt that I need to add my voice to the skeptic side of the discussion for the sake of my children and grandchildren (and yours).

This chart is included in that paper. This picture is worth a thousand words, and it's not just exclusively Northern Hemisphere where we're seeing with temperature anomalies.

Let's go down to New Zealand, Severe frost, damaging wine crops. A “rare frost” as they call it in the news media.

Severe frost beats protection measures to damage Wairarapa wine crops

ILLYA MCLELLAN/STUFF

Some Wairarapa vineyards were impacted by a **rare frost** last Friday. (File photo)

A rare type of frost? It's either a frost or it's not. It's cold or it's not. Maybe they could just change the lexicon a little bit. Shift it over and say, “An extremely rare late spring frost that killed wine crops which shouldn't have happened.”

stuff Oct 24 2018 **farming**

Severe frost beats protection measures to damage Wairarapa wine crops

While many Wairarapa vineyards dodged last Friday's unusual frost, a few pockets were hit hard.

Up to 50 per cent of some vineyards' crop may be lost due to **a rare type of frost** that hasn't been seen in the area since 2006.

The region's vineyards were assessing the damage after some of the usual mitigation measures failed.

At the bottom of the news article link, look at those other stories! Frost, rot cut French wine output to lowest in 60 years; Marlborough vineyards frost over. I thought it was the warmest year ever? It's way late spring down in the Southern Hemisphere.
