Let's take a look back what happened in Chicago. Over a foot of snow, but then, Chicago is always ready for these types of storms. This one however, just pounded the city with power outages.

## Snowstorm drops up to 13 inches on Chicago area, strands travelers, leaves tens of thousands without power

Residents dug out from a winter storm Nov. 26, 2018, which dumped as much as 13 inches of snow, forced the cancellation of more than 700 flights at the city's airports and the closing of hundreds of schools, and knocked power out to more than 300,000 homes and businesses. (Chicago Tribune)

More than 140,000 residents without power because the heavy snow took down the trees that then took down power lines; 1,300 flights were canceled from O'Hare and other regional airports.

Keep in mind that Chicago is one of the snowiest cities in North America, but they broke their all-time snow records during the event. Not only that, they're incredibly prepared for these types of snow storms but the disruption of services was astounding this early in the year.

I don't even know what's going to happen in January and in February when they usually get their highest snowfall totals and coldest temperatures. Chicago had the earliest snowfall for 30 years in the Autumn as well.

# Snowstorm drops up to 13 inches on Chicago area, strands travelers, leaves tens of thousands without power

NOVEMBER 26, 2018, 8:35 PM | CHICAGO

Chicagoans digging themselves out of one of the city's worst November snowstorms can look forward to dry weather for the next few days, but snow-related problems persisted late into Monday with extensive delays at Chicago's airports and power outages for more than 140,000 residents.

Cancellations and delays still plagued airport travelers as of Monday afternoon, with more than 1,300 cancellations at both airports, most of them at O'Hare.

We've been told that heating oceans and feedback loops from Global Warming are going to cause heavier snow falls. At least, that's what they say now, but, if this year is only the fourth warmest on record and this extra snowfall is supposed to be caused by evaporating oceans and all the heat, why didn't we have all these record snowfalls a few years back when it was actually warmer, during the El Nino?

Why is it only now that we are getting all these snow records and cold records being broken?

## Snowstorm drops up to 13 inches on Chicago area, strands travelers, leaves tens of thousands without power

By itself, the storm — the second measurable snowfall for the month — catapulted this month to sixth snowiest November in Chicago history, behind November 1975's total of 10.8 inches, according to the National Weather Service. Chicago recorded 1 inch of snow Nov. 9, the earliest snowfall in 30 years."

**Records:** Aside from making this a record month for snowfall, the season's first winter storm is one of the worst to hit the Chicago area in November, according to the weather service.

- November 25-26, 1895, 12 inches
- November 20-21 2015, 11.2 inches
- November 6-7 1951, 9.3 inches
- November 25-26 1975, 8.9 inches
- November 25-26, 8.4 inches

Currently we are heading into a Grand Solar Minimum that's supposed to be amplifying and intensifying from this point. Maybe that's the answer.

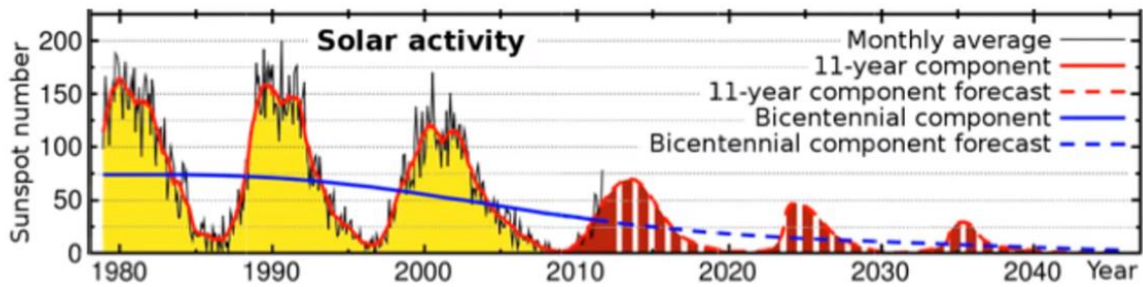

Figure 3. Variations of both the TSI and solar activity in 1978-2011 and a forecast of their variations in cycles 24-26 (up to the year 2045)

There's a thing in the same region here, Clinton, Iowa, west of Chicago. It's there on the map below, they've had such record-breaking snowfall that the city is asking the residents to clear away any fire hydrants near their property, for easy visibility, in case there's an emergency.

## Visible fire hydrants save lives, property

DAVENPORT — With the record snowfall that the area received Sunday, Iowa American Water is reminding residents in its service communities to clear snow from fire hydrants that may be located on or near their property.

Iowa American Water is asking residents who have a fire hydrant on or near their property to take a few minutes to clear away the snow so it is visible in the event of an emergency.

So I thought, how much snow could have been there? Well, this much record snowfall in Clinton, Iowa.

When I was in the **Clinton Herald** website, I entered “record snowfall” into the search bar, and lo and behold, record-breaking snowfall in February 2018 in the same place. So now, we have record-breaking snowfall in the same year in November 2018.

Not only that, back in January 2018 they broke cold records. This is a kind of amplification step-up that you'll see in these regional areas from Chicago to New York, Great Lakes, especially Pennsylvania. Record after record after record after record is being broken this year both snow and cold!

### Record-breaking Cold

By Jacqueline Covey [jcovey@clintonherald.com](mailto:jcovey@clintonherald.com) Jan 2, 2018

CLINTON — The Gateway Area is starting out 2018 with little snow, like last year, though average temperatures today are harshly colder than la...

So, when another climatologist steps out and says all the recent Global Warming was not due to CO2 but ocean cycles and water vapor, that's something. The Atlantic is switching to its cold phase where ocean waters are going to be cooler for the next 30 years in a natural Earth cycle, that also affects the European temperatures and European weather. Now we are facing overlapping cycles.

## NoTricksZone

### 40-Year Meteorologist Says Recent Global Warming Due To Natural, Ocean-Cycle-Related Water Vapor, Not CO2

By P Gosselin on 27. November 2018

“ Sometimes I believe that folks on the other side of the issue are getting a little panicky because they know when the Atlantic does switch into its colder phase, the Arctic sea ice going to go back to where it was 20, 30, 40 years ago when we were in a colder phase.”

#### Scientists and modelers neglect oceans

Also on **NoTricksZone**, they have a great run down here of other peer-reviewed research that is not making it into the mainstream media. They also talk about other causations other than CO2 for all the weather extremes you're seeing on our planet. There are more than 1500 peer-reviewed papers in this small segment right here. I've linked this below in the description box.

Martin Armstrong with another article on Global Cooling. Now it's getting to the point where economists are noticing that rising food prices are going to crush the economy. Economists are now chiming "Grand Solar Minimum means huge declines in our economic activity."

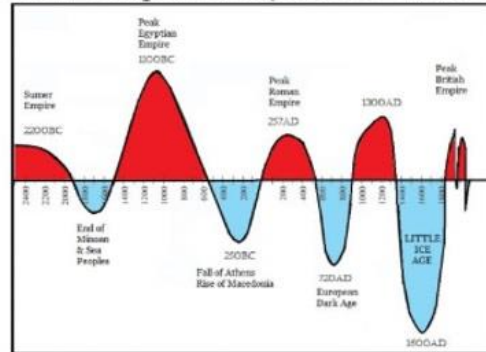

We also have Grand Solar Minimum effects reducing crop yields. They're going hand-in-hand and now there's more than one industry that's going to explain what's happening with 400 year solar activity cycles, and how it's going to affect your life and mine moving forward.

# Global Cooling is Real – Major Temperature Low 2046?

While NASA has now confirmed that the outer atmosphere is getting cooler, it seems desperately insane for people to keep denying the possibility the Global Cooling is taking place rather than Global Warming when the former brings famine and the latter brings economic expansion as civilizations rise. **The rise of Rome was due to global warming** as was the case after the Dark Age when they call that the Medieval Warming Period which was 950 to 1300AD.

Global Temperatures (2500BC - 2015AD)

In Martin's article, he has this image of great George Washington reviewing the ragged army at Valley Forge. This is a stamp collection. The thing is, how much cooler was it back then in 1774-1776? They were able to drag cannons, horses and wagons across areas that haven't frozen in centuries in the United States and along the east coast.

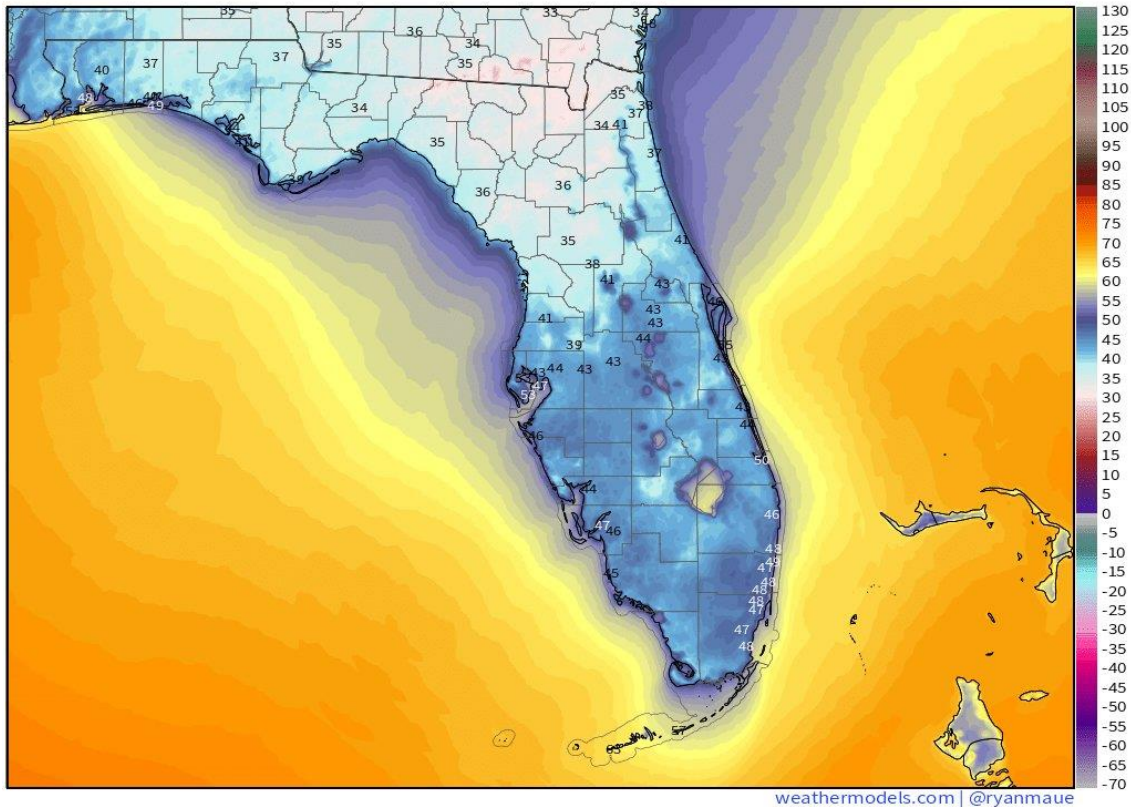

Washington Reviewing His Ragged Army at Valley Forge  
From a Painting by William T.rego

Jumping a few days back into Tropical Tidbits, Florida was going to get down near freezing, or break the freezing mark. I called Miami to hit the freezing point but it did not, it was still in the low 40's. But further north, from Orlando back to Panhandle, it hit the freezing mark. So I was off about a hundred and fifty miles on where the actual coolest line descended through.

There is an anger rising in France, Paris is burning and Macron needed to call out the National Guard. France is under the State of emergency and the government is going to try to quash the movement.

It's going to get incredibly hectic over there in the next few days. If you want to talk about bread and circuses, here we go, distraction to keep your focus on anything except rising food prices and crop losses.

### Anger over rising fuel taxes sparks fiery French protests

Thousands of French police have deployed to contain the eighth day of deadly demonstrations that started as protests against tax but morphed i...

[usatoday.com](https://www.usatoday.com)

If this much anger is coming out because of rising fuel prices and taxes on fuel, can you imagine how this is going to progress when our food supply is affected?

Right now, it's fuel first. Food is next and will be the main catalyst to flip our societies into something not seen in four centuries.

## STOCKTALK JOURNAL

France In Chaos; Macron Considers State Of Emergency Amid "Yellow Vest" Protests; "All Options" Considered

Off to **ZeroHedge** here's a great article. "Buy Bitcoin," I love this guy. He got involved in the protests. The whole thing is, as Macron says, "fuel hikes are necessary to combat climate change". I don't know. Everywhere you look, scientists, astrophysicists and climatologists are saying we're heading towards Global Cooling and we need to start thinking about how farmers are going to shift to different types of agricultural products as Earth's climate system shifts from cooler, wetter, drier, more severe winters and to shorter summers.

The E.U elite are still trying to push down our throats this agenda of Global Warming. I can see why the citizens are fighting back and saying, "You're expecting too much in our lives already." What happens when food prices triple during the Eddy Grand Solar Minimum?

## ZeroHedge

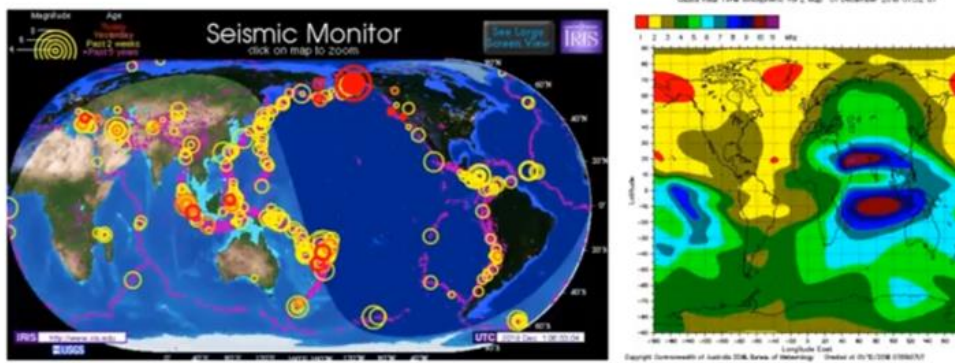

France In Chaos; Macron Considers State Of Emergency Amid "Yellow Vest" Protests; "All Options" Considered

Macron says the fuel hikes are necessary **to combat climate change** – a move which has tapped into the deep dissatisfaction toward his many liberal reforms which many French voters feel favor big business and the wealthy.

Let's talk about the connection between disturbances in the Ionosphere and the 7.0+ earthquake in Alaska. Those two areas overlapped exactly at the same time, in the same place here on our Earth, triggering the quake.

When I talk about the Electric Universe, Birkeland Currents and how our star is going into a decreased activity state that's ushering in a Grand Solar Minimum. There's another Wikipedia article under my video, a stamp of authenticity. Every time I see one of those, it's like a badge. I should be pinning those on my shirt. YouTube can't let you believe anything other than CO2 warming.
