

## Upcoming Food Shortages Blamed on Farmers & Fishermen

An article by Mac Slavo talked about the bankruptcy, not only of dairy farmers, but farmers in general across the Midwest. This led to \$ billions in losses, so most of them had to sell their farms.

In addition, the article talked about a food crisis that is upon us as a result of the bankruptcies. The farmers who incurred huge losses were no longer given loans by banks because they are considered “high risk”, and if they could not grow food, then we may have to import.

You should then expect not only major price hikes, but food unavailability or food shortages as well. These are the types of food that you want to hold on to, because these are the hearty foods and they are easy to store. Beans, rice, salt, canned goods and the list goes on. You can find these types of preparedness lists easily through a search engine.

## FOOD CRISIS ALERT: U.S. FARMER INCOME PLUMMETS

The food crisis could be upon us, as farmers in the United States report that income has plummeted. **If farmers can no longer afford to grow the food we all buy in the stores, expect not only a major price hike on the food that is available but a shortage of whole foods as well.**

In relation to the earlier article, tensions also gripped fishermen in Lake Victoria. This is the second time that Uganda has arrested Kenyan fishermen, and the Kenyan military/police stepped in, to rescue them. A spat over the dwindling fish supplies in Lake Victoria started it all. So, as you can see, we are already seeing people fighting for food resources in less developed nations. This one here is a perfect example. Links to this article is written at the end of this article.

## Tension grips Lake Victoria after Ugandan officers hold Kenyan fishermen

*The EastAfrican*

MONDAY JUNE 18 2018

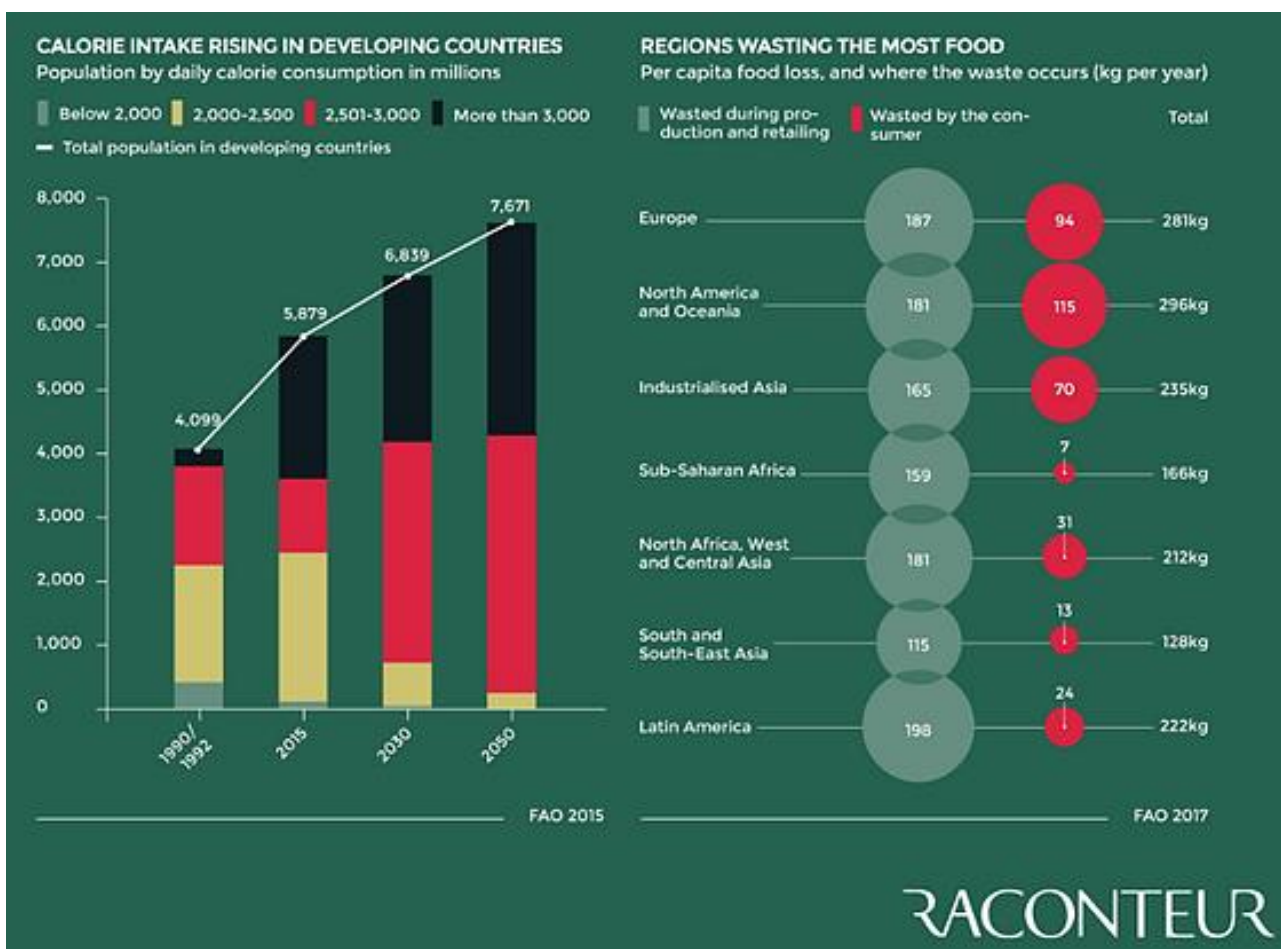

According to Mr Crispin Nyaga, Usenge police boss, the soldiers were three, one in uniform and armed. They seized the boats, arrested six fishermen, and took away hundreds of kilogrammes of fish.

"The authorities took away about 400kgs of fish but released the fishermen," said Mr Nyaga.

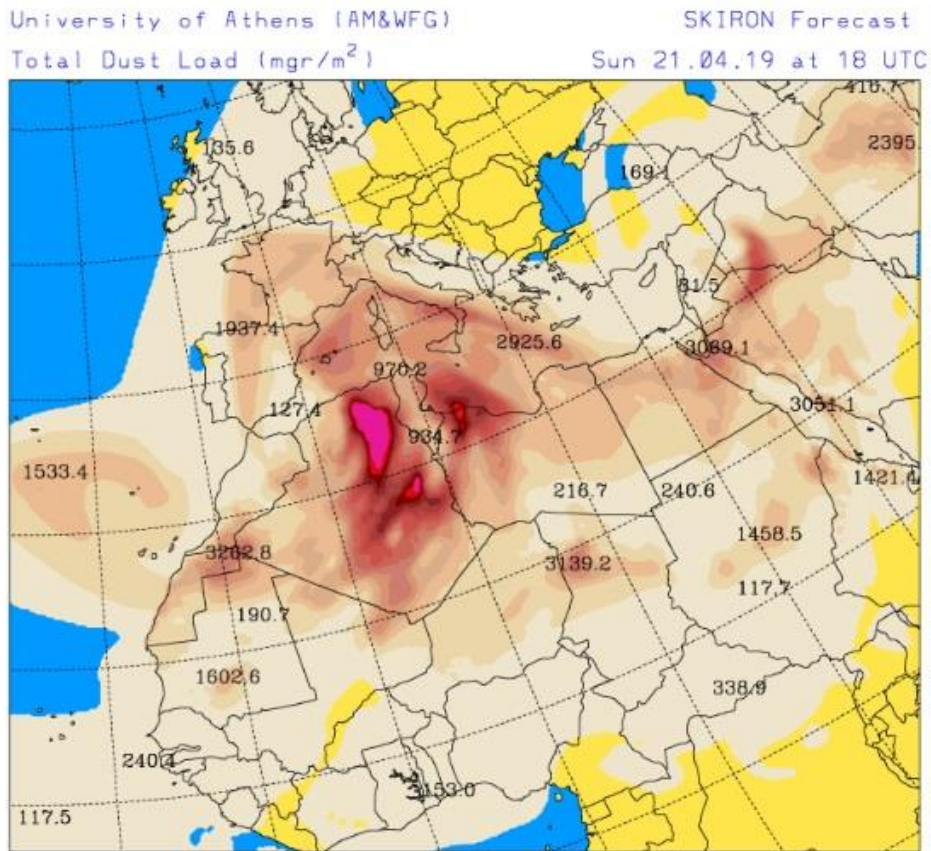

This time round, the Quick Response Team of the Administration Police of Kenya gave hot pursuit and rescued both fishermen and the boats, he said.

With that being said, calorie intake in developing countries is increasing, so everybody is demanding for more protein, meat, and fish as we move forward. But, in this Grand Solar Minimum/magnetic pole reversal that we are going into, everything is amplifying. It may still be a conjecture, but the stark reality is, lesser food availability is the in the future for everybody.

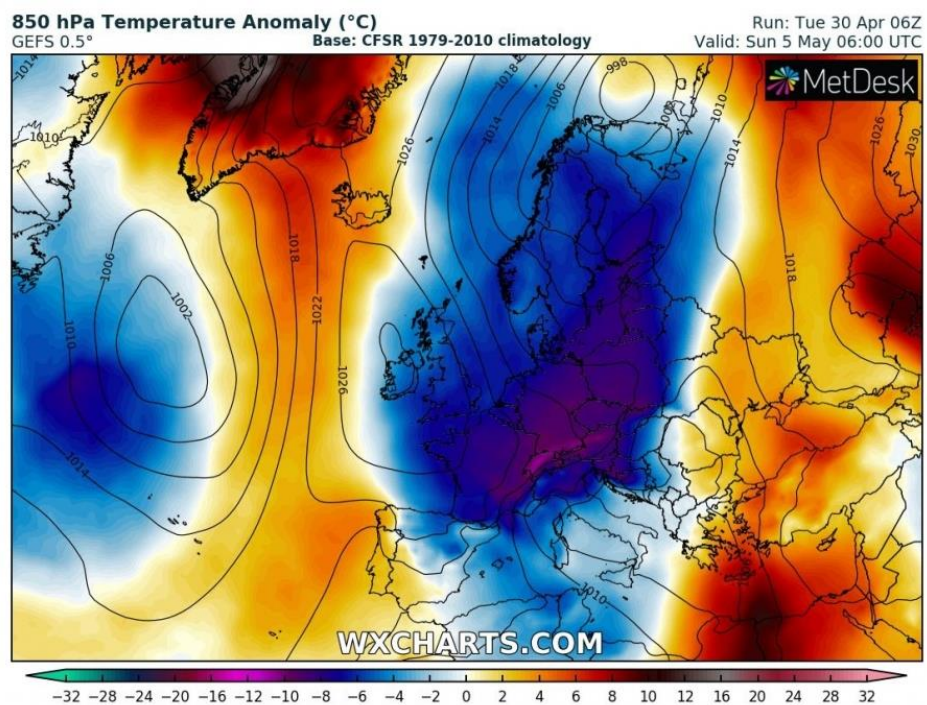

It is then fitting to look at regions that waste the most food globally. As shown in the chart below, North America and Oceania are at the top of the list. We have to think of ways to be more efficient with food. Look at Sub-Saharan Africa, they are by far, the most efficient in terms of food. So, what can we learn from them about food storage and preservation techniques of food leftovers?

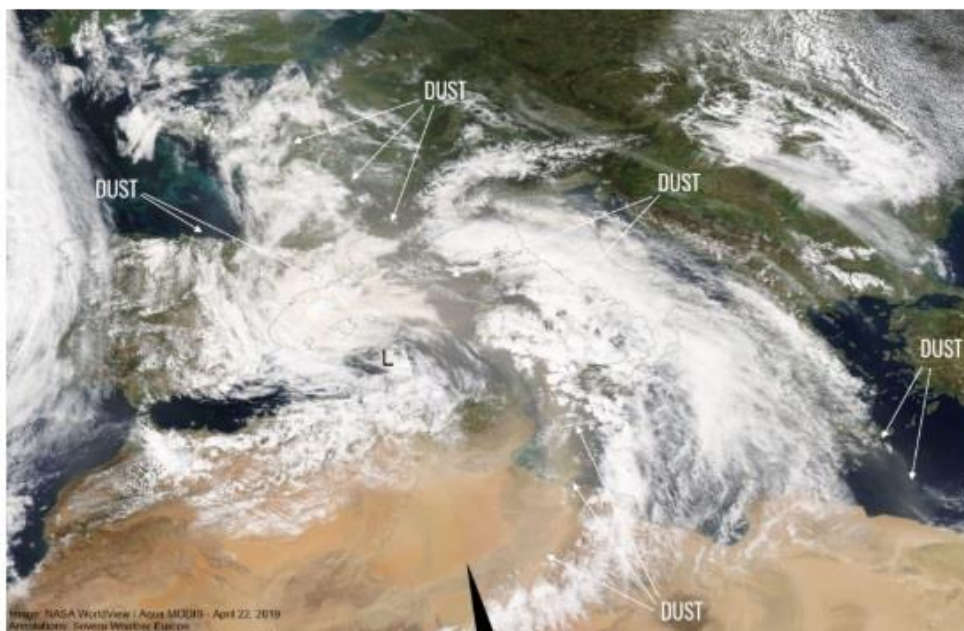

Meanwhile, have you been made aware of the incredible dust storm on the 21<sup>st</sup> of April? You start to see this sort of scorpion tail, as shown on the map.

Additionally, what remains in the atmosphere is going to collide with the Arctic front that will come down over Europe, and this will continue through the 2<sup>nd</sup>.

If direct collision is going to happen, the storm that is pulling the trailing edge of the Saharan dust, as shown in the figure below, is going to be experienced. This chart is off *Aqua Modis* satellite.

*NASA Aqua satellite made this image of the broad cutoff low pushing Saharan dust across the Mediterranean into Europe today, April 22, 2019 around local noon. Note the thick band of dust pushing across the southern Mediterranean between Tunisia, Malta and Sicily, across the Tyrrhenian sea,*

When the Saharan dust collides directly with the Arctic front; I hope you can observe the heat difference; Greenland might actually start to melt again during the melt season, as has experienced record gains over the last few years.

At present however, we are faced with crop decimating cold, and it's on its third year in a row. Everything that budded early has been lost during these late season freezes, which cut agricultural production forecast yields.

Fruit production is already down 40% across Europe, and this is not going to help, at all. This is going to further hinder crop growth. The amount of fruit that is left available for the European exporters, is yet to be announced.

Do you still remember the black cover of *The Economist* magazine this year, 2019? I said then that it was the “Black Horse of the Apocalypse”, the famine.

Look at these four horsemen riding directly over Europe.

Grand Solar Minimum coupled with a magnetic pole reversal marches full steam ahead, as we go through the precessional cycle, or moving through the Galactic Cross.

Now, with all these warnings, how is your food security? Are you preparing? Do you think about food unavailability, or price hikes doubling your food prices? How will that affect your economic situation? You should seriously consider how to get some food together, and learn how you can store it for years.

Thanks for reading, I hope you got something out of the article. If you like more information like this, I produce the tri-weekly Mini Ice Age Conversations podcast, 30 minutes of in-depth analysis on the GSM you can take on the go throughout your day.
