

Climate Turns 180 Degrees: Continental Rains & Cold

Propaganda such as 'there is massive melting ice' and 'the seas are going to rise' are still being pushed. We have heard this for 30 years now, but why is everybody still developing resorts on the beaches? How are they getting those loans if it is going to be washed away in just a few years?

Mike @Michael63594404 · 14h

Theyre still pushing the propaganda

I have also been following the massive water inflows in the Great Lakes, and according to an article in the *Great Lakes Echo*, Canadian study revealed that erratic snowfall is in store for the Great Lakes, which means more snowfall. So, forecasters are already calling for more snowfall, but are still saying the same thing, global greenhouse gas emissions must be near zero by 2050, which is impossible.

GREAT LAKES ECHO

By Cassidy Hough | May 15, 2019

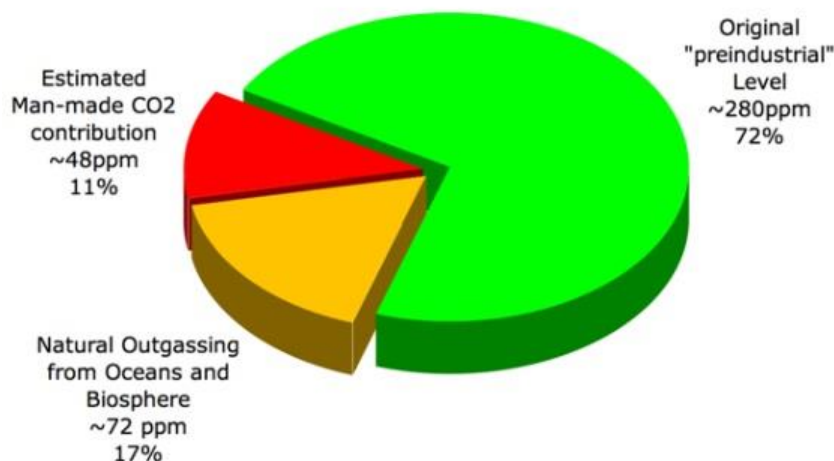

Canadian study: Wide water level swings, erratic snowfall in store for Great Lakes

Greenhouse gas emissions **must be near zero globally by 2050** for the world to meet the goal set by the United Nations in 2016 to limit global temperature to no more than 2 degrees warmer than what it was before the Industrial Revolution.

A look at the origins of atmospheric CO₂ as shown in the pie chart below, the pre-industrial level is at 280 ppm, but I think they have forgotten all the natural outgassing, such as oceans, volcanoes, biosphere, termites, decomposing forests and things we can never control, but has actually a higher input in the whole system than human induced CO₂ contributions.

Origins of Atmospheric CO₂

So, how are we going to get to zero, in terms of CO₂ footprint? We never will. That statement about CO₂ becoming near zero is just another fallacy, just a talking point to try to extract tax money and global tax. It is not CO₂, it is not you, it is the Sun and the natural processes that are repeating.

APM Reports  @apmreports · 4h 

In February, we reported that Chicago was one of six major cities on the **Great Lakes** where **water** rates had spiked, and that the city had sent more than 150,000 shutoff notices in the past decade.

On Monday, Lori Lightfoot took over.

New Chicago mayor to end water shutoffs

Following an APM Reports investigation of rising water rates, Lori Lightfoot says the city will no longer deprive people of "a basic human right."

apmreports.org

This is also a 'nice' statement from the *APM Reports*, Chicago Mayor is going to end water shutoffs. They are really pulled into this whole debate because their excuse prior to this was, the lakes are evaporating as the experts says, because of Global Warming. Now, we are at 100-high water levels, so that excuse went out of the door.

A lot of people have been asking why they have cutoff water supplies, when there is so much water that it is even flooding out of the Great Lakes. Prior excuse of evaporating Great Lakes due to CO₂ no longer hold water. No pun intended.

Richard R Balsamo @balsamo_r · May 23

100-year high **water** levels predicted for the **Great Lakes** this summer. "Climate change" to blame. Yet past record-low levels also said to be from "climate change." Climate change — is there anything it can't do?

High Water Levels on Great Lakes Flood Towns, Shrink Beaches

High water levels across the Great Lakes, combined with heavy rains and a melting snowpack, are wreaking havoc in some Midwestern communities.

[wsj.com](https://www.wsj.com)

And on the same article from *Great Lakes Echo* on Canadian study, it was stated there that we need to understand from geological long-term past that climate is dynamic. I totally agree on that.

GREAT LAKES ECHO

By Cassidy Hough | May 15, 2019

Canadian study: Wide water level swings, erratic snowfall in store for Great Lakes

"But what we know from **geological long-term past** is that climate is dynamic, and it changes in response to factors," he said. "And there are a number of these factors in play right now, including increasing greenhouse gas concentrations.

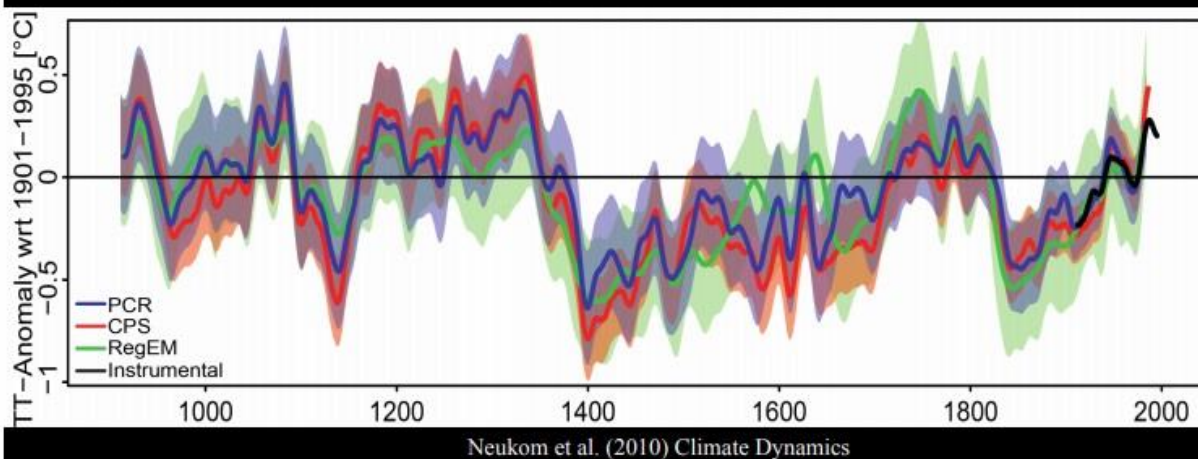

"Ultimately the potential fear is that the climate changes, and we, as humans, might not be able to deal with the outcome."

Looking at the South American multi-proxy climate reconstructions, the left side of the chart is 1000 AD, while the right side is where we are presently, but I want you to take a look in the 1150s during that descent, the Grand Solar Minimum.

So, how did it warm? There were no factories or cars during that time. Notice also the natural warming around 1200 AD, then we plunged around 1400 AD straight into another Grand Solar Minimum. Those natural warmings that happened from 1400 to 1800 were from “Natural Variability”. It plunged off in the Dalton Minimum, but then it rewarmed again naturally.

Progress in South American multi proxy climate reconstructions

- First multi proxy temperature (and precipitation) reconstructions from southern South America using 22 proxies: most confidence in post 1706 period
- Three statistical techniques used to check sensitivity of the results (PCR highest skill)
- 900-1350 around/above C20th average: cool periods ~1400–1700, 1850, warm 1710-1820
- Precipitation reconstructions also developed (Neukom et al, GRL in review)

Meanwhile, since I talk about issues like this, I want to give a shout out to Stix. He pushed a video entitled, “Three Ways Independent Creators Can Survive the Censorship Dark Age”. The link to this video is found at the end of the article. This is all about shout outs, because sharing is being curtailed across all social media, except for MINDS, Bitchute, GAB and others that are alternatives to Facebook, Twitter, YouTube, etc.

In this video he discussed giving shout outs to people that you appreciate, because maybe there are other people watching your feed, but are unaware of others that you appreciate and also deemed as experts or thought leaders across this changing landscape of politics, climate, economy and whatever else is out there. I do encourage you to watch the video, he does political commentaries, which I think are excellent.

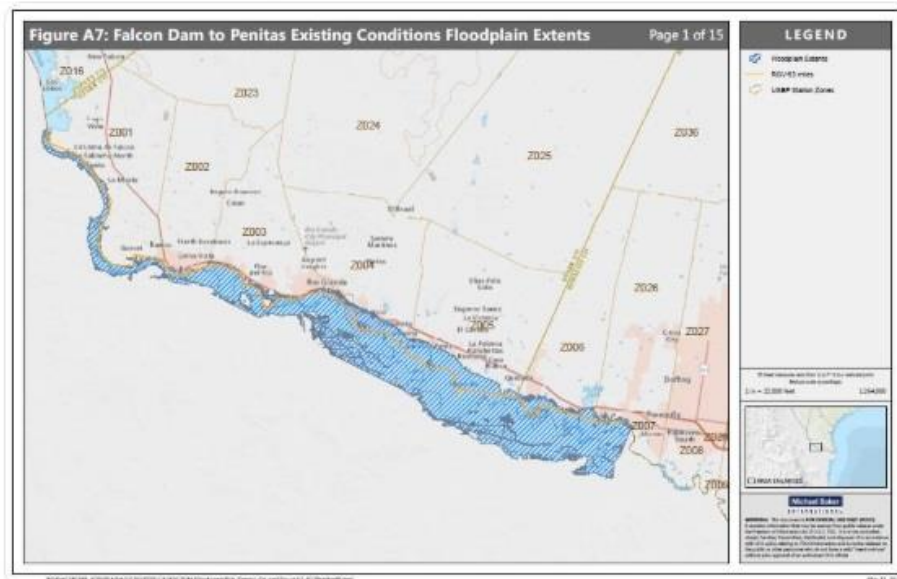

#Censorship #Creators
Three Ways Independent Creators Can Survive the Censorship Dark Age

Over to the *No Border Wall*, I am shocked to have even read this. The border wall is an attempt to actually “flood out the Mexicans on purpose”. The rise of the Rio Grande is going to push flood waters into Mexico.

No Border Wall @No_Border_Wall · 10h

This map shows the bollard border walls that Trump plans to build in the **Rio Grande** floodplain. These walls will dam water that would otherwise drain into the river, and when the **Rio Grande** rises they will push **flood** water into Mexico. Homes will be lost and people will drown.

A 143-year old record beaten in Montreal for the number of rainy days in a row. It has rained for 13 days in a row. What is it with records falling across the planet? Snow records, cold records and rain records breaking the 150-year mark has become a commonplace now. This is definitely not because of CO₂; this is due to the intensifying Grand Solar Minimum.

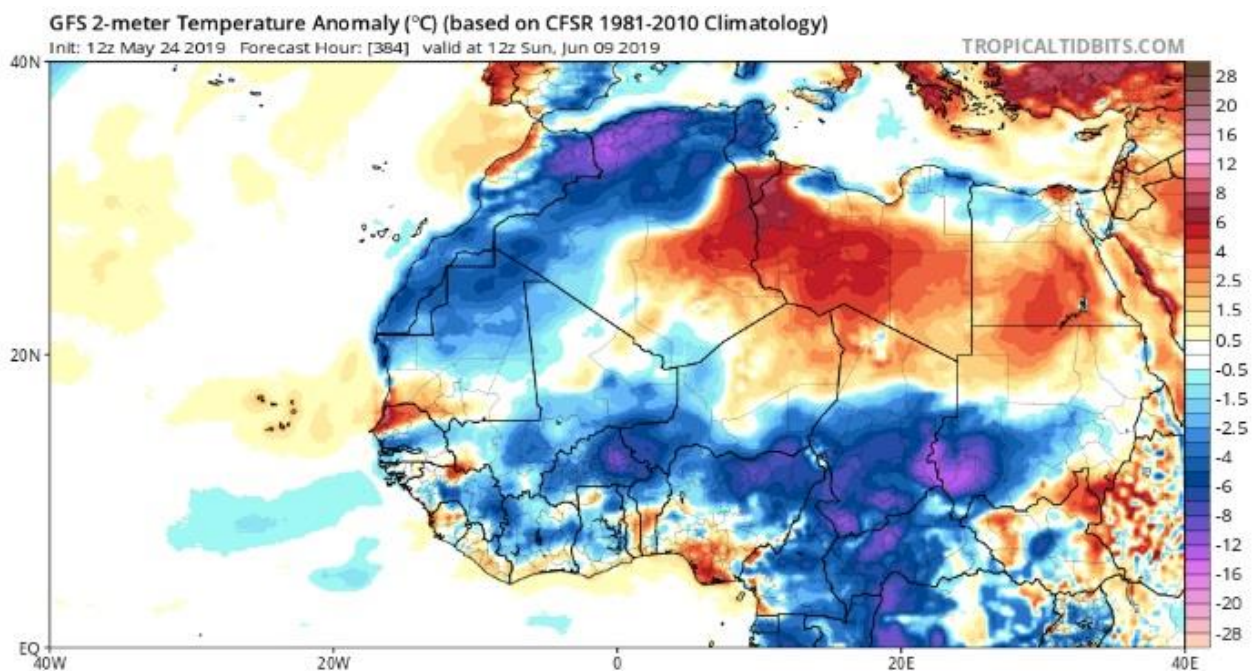

A 143-year old record beaten in Montreal!

Saturday, May 25, 2019 at 16:19 - With thirteen consecutive days with precipitation, Montreal has just [shattered a record dating back to 1876](#).

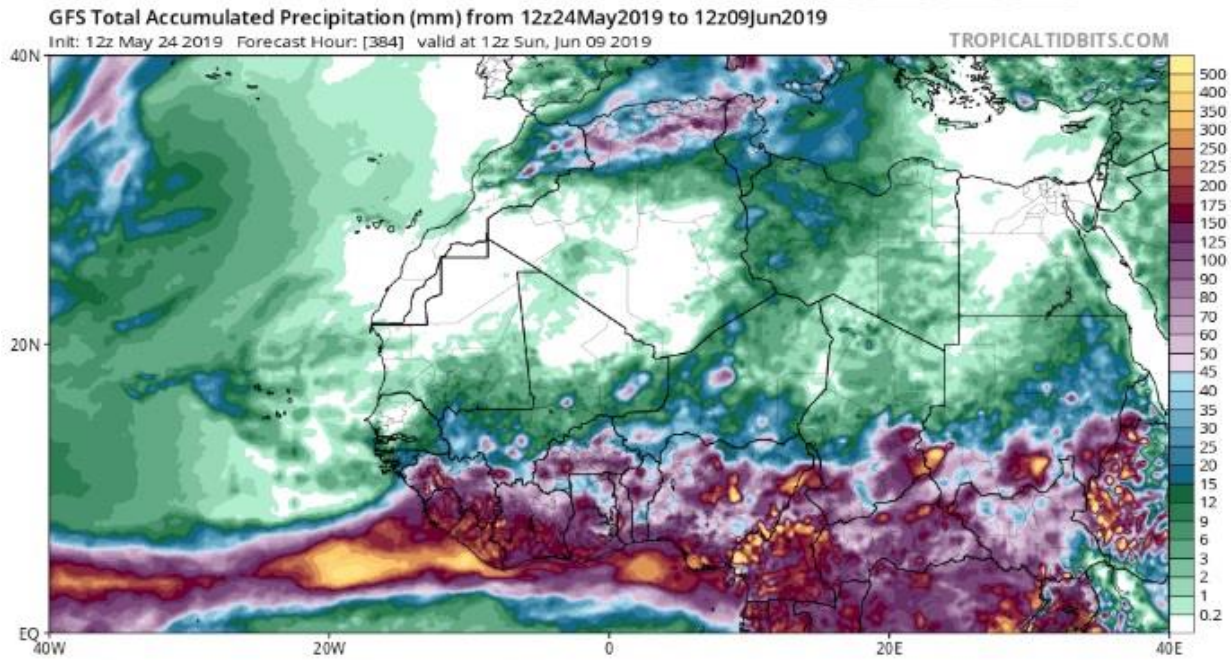

The previous record was from 1876. It has happened a few times that the bar of twelve consecutive days is reached. This was particularly the case in [2011](#) and [1979](#).

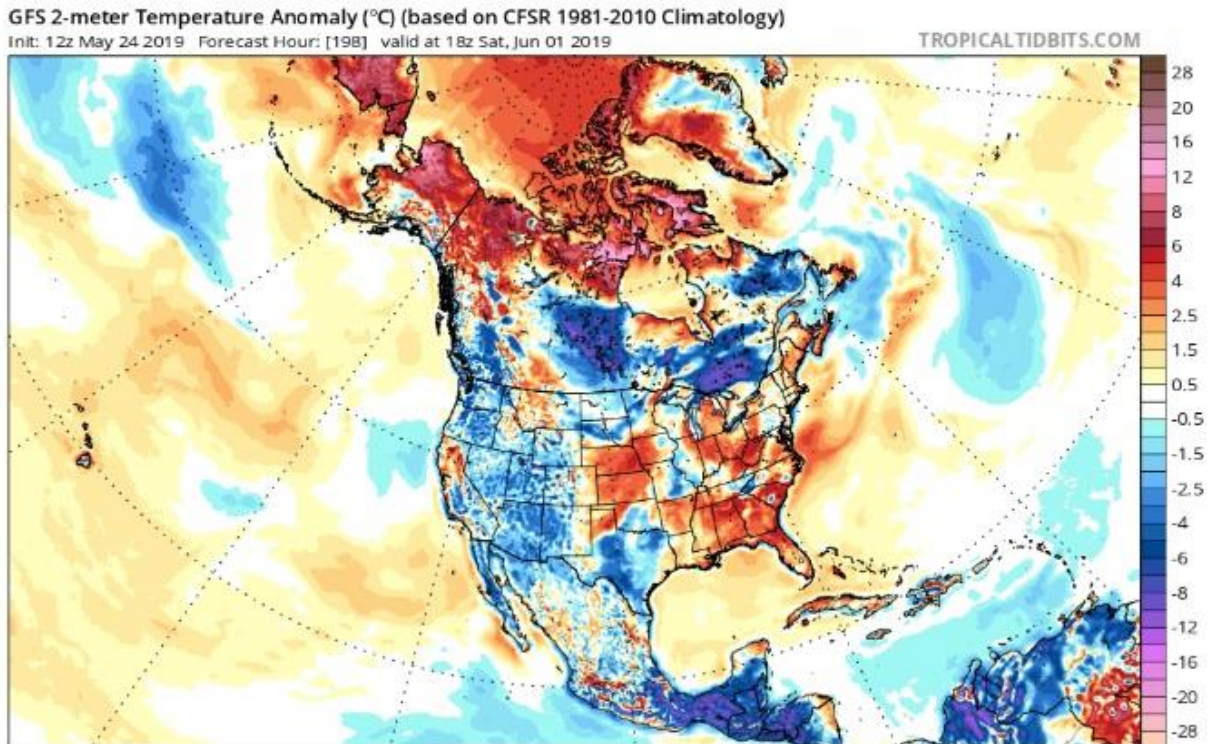

Notice the amount of rain in northern Africa as well.

Central Africa is going into monsoon and it is going to be raining down there but take a deeper look to the northern African areas. There will be increased crop yields due to more rainfall.

A look at southern Mexico, particularly in Guatemala and in Honduras. How cold do you think that is? Over the east, in Venezuela and in Chile, which are really at the far south will have that anomalous cold.

Thanks for reading, I hope you got something out of the article. If you like more information like this, I produce the tri-weekly Mini Ice Age Conversations podcast, 30 minutes of in-depth analysis on the GSM you can take with you on the go.
