

Record Cold Summer Temperatures Overlooked

Look at what the mainstream media has not covered in their news reports. Remember they were trumpeting at the top of their lungs that France has had all-time-record heat record, but they missed all the record cold that occurred in the same timeframe. MSM are always focusing on the heat, and that is what we call, 'cherry picking'.

degree Celsius drop occurred in a matter of month and a half; and then, these volcanic eruptions.

It is absolutely going to be incredibly cold this winter and you are going to see some atmospheric disturbances that will not make sense, unless you analyze them as events brought by multi-thousand-year cycles.

Also, looking at the beginning of the month, a huge amount of snow fell in at the end of June into July, with record cold in Canada and the decimation of the agricultural grow zones in the United States.

Snow, snow and snow again! And that in June on the first day of summer!

Strange Sounds - Jun 22, 2019

All-time coldest temperature ever recorded in Brazil for this time of the year. This waterfall usually does not freeze until the middle of winter in the Southern Hemisphere, which is 2 months from now. The previous lowest temperature record in Brazil is -8.8 degrees Celsius, well until today.

All-Time Low Temperature Record Falls in Brazil - Electroverse

All-Time Low Temperature Record Falls in Brazil -- one of Santa Catarina's main tourist attractions, the Morro das Torres cascade, actually froze over:

electroverse.net

Thermometers reached -9.2 degrees Celsius, which is by far, the coldest temperature ever recorded in this place. Also, this cold event is two months early and broke the all-time coldest winter temperature ever recorded in this location, Urupema.

Record cold in Brazil

The thermometer reached -9.2°C at the station Epagri-Ciram in Urupema, the lowest temperature ever recorded. The previous record of -8.8°C was set
sott.net

Mauricio also shared this information about freezing temperatures down to sea level. Freezing beach temperatures, Brazil is usually a hot place isn't it?

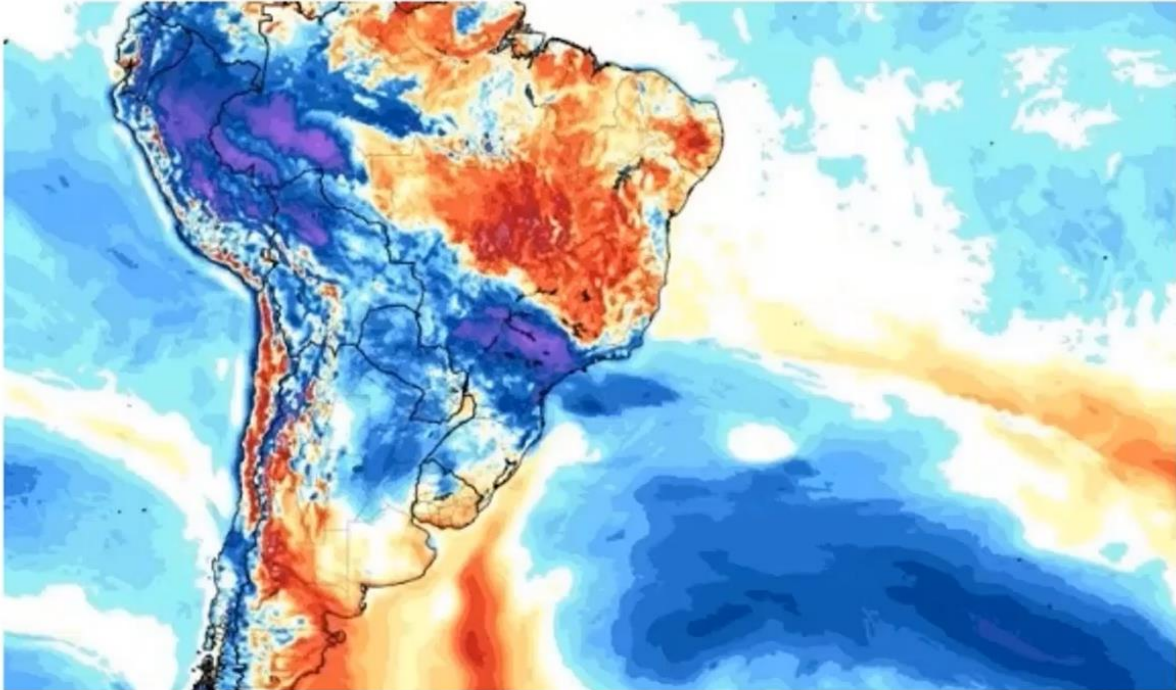

Mauricio Moreira
[@maurice_moreira](https://twitter.com/maurice_moreira)

This is for everyone who only thinks about Brazil as a hot place. Today the temperature reached -9.2°C in Urupema/SC and the waterfalls just got frozen. In my hometown, at the sea level and coast, it reached 0°C and snowed.

If you look at the forecast for July 18th, colder temperatures but this is expected as the Southern Hemisphere is approaching winter, while the Northern Hemisphere is into summer. So, for another month or so, it will be like a January equivalent for the Northern Hemisphere there.

GFS TEMP ANOMALY for JULY 18

When you see the Netherlands, which is supposed to be going into its hottest time of the summer experiencing record coldest temperatures ever set in July, it is confusing. It was only a week ago that the mainstream media was talking about record heat in France, but this time they missed the Netherlands. I thought that they would balance these events with a bit of comparison, but no.

ELECTROVERSE

EAST NETHERLANDS RECORDS ITS COLDEST EVER JULY TEMPERATURE

📅 JULY 4, 2019 📍 CAP ALLON

In the east of Holland, rare July ground frost was measured overnight Wednesday into Thursday as an anomalous cold front replaces Europe's 3-days of heat.

At the former Twente airbase, the temperature plunged to -1.6C (29F) on July 04, which, according to Weerplaza weather agency, was a **new all-time record-low for the month of July**, for the east of the country.

Slovakia has its temperatures dropping 1 degree Celsius below zero also during summer. That is about 30 degrees Fahrenheit, so water in this place has turned to “summer” ice as well.

The mercury in Poprad, a city located at the foot of Slovakia's High Tatras Mountains, **dropped to -1C (30.2F) at a height of 5cm above ground level** on Wednesday morning.

Then in Germany, every temperature found on the chart below shows a new cold temperature record that has broken the old record for this time of the year. This is again another indication that something anomalous is happening to our weather and climate systems bases on repeating cycles not CO2.

ELECTROVERSE

MULTIPLE ALL-TIME LOW TEMPERATURE RECORDS SET ACROSS GERMANY — RARE JULY FROSTS RAVAGE SAXONY

📅 JULY 5, 2019 🗺️ CAP ALLON 💬 1 COMMENT

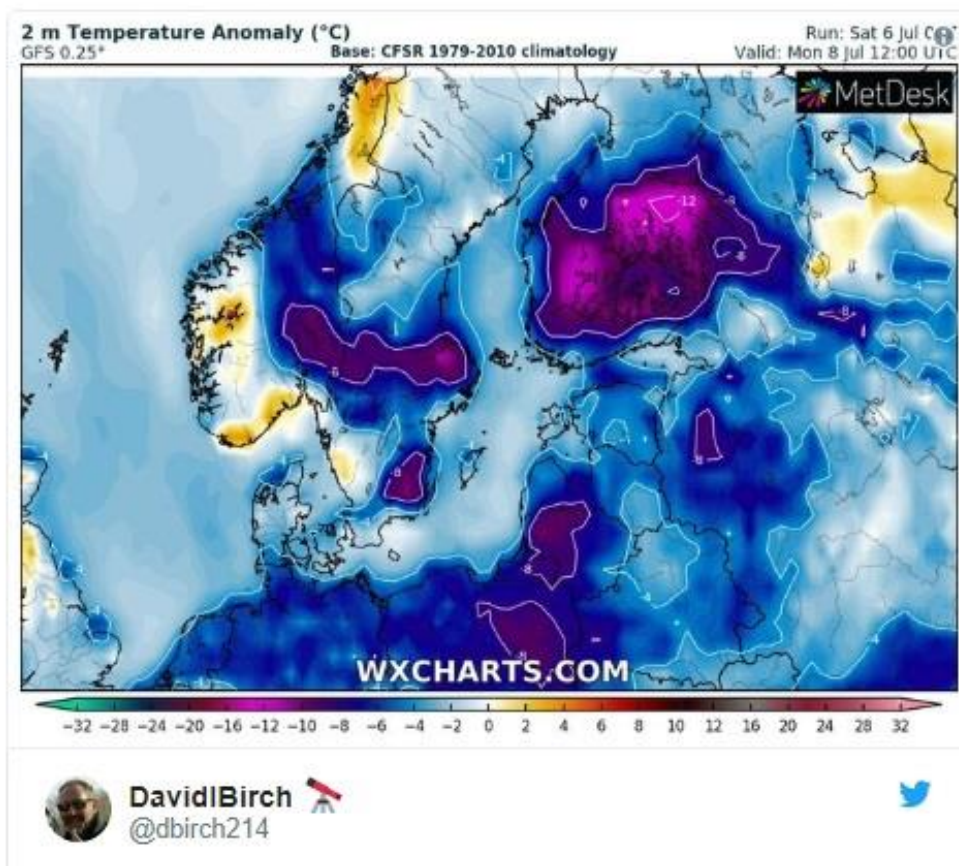

The mercury in [Rotenburg, Lower Saxony](#) plunged to **2.9C (37.2F)** on Thursday morning — low enough to break the town's all-time record cold temperature for the month of July which had stood since 1946, according to [wetter.com](#).

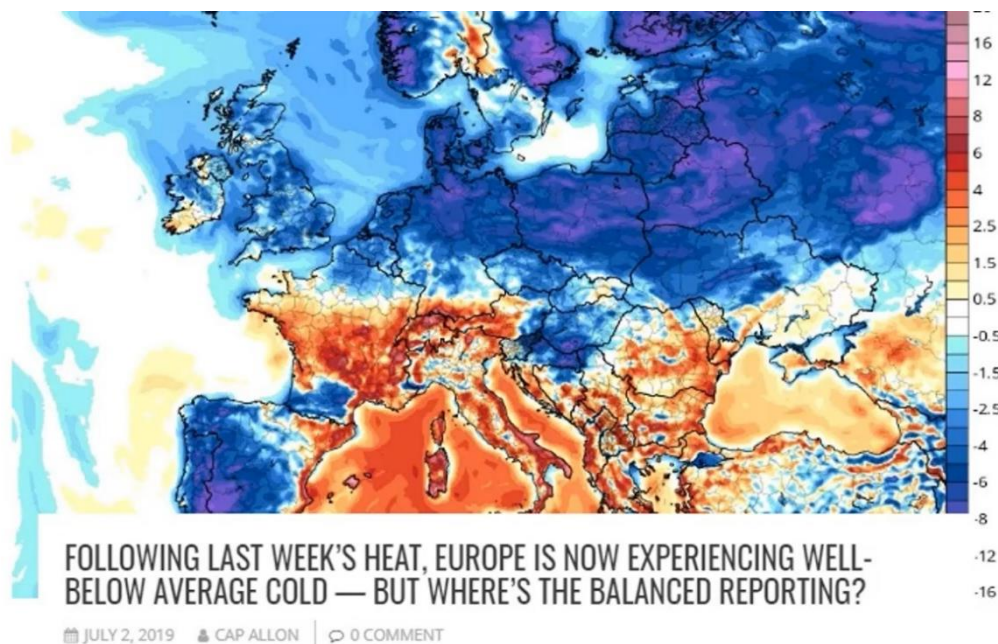

I've listed a few below (*data again courtesy of [wetter.com](#)*):

- Quickborn: 4C (39.2F) — lowest July temperature since 1999.
- Göttingen: 4C (39.2F) — lowest July temperature since 1996.
- Soltau: 4.1C (39.4F) — lowest July temperature since 1986.
- Friesoythe: 4.7C (40.5F) — lowest July temperature since 1971.
- Lippstadt: 4.8C (40.6F) — lowest July temperature since 1990.
- Diepholz: 5.1C (41.2F) — lowest July temperature since 1971.

Dark purple on the GFS model for the forecast temperature suggest 20- or 25-degrees Fahrenheit below normal temperatures centered over Nordic areas now.

That will, however, spread as far as the grow belts of the Ural Mountains stretching east. Take note that the crops are in their growing spurts at the moment there, so I am wondering how this 25 degrees Fahrenheit below normal temperatures would affect crop production in these areas. Will they have the same yield that they are expecting?

Abnormal summer snows were also seen in Mongolia; and it is snowing at the high altitudes of Black Sea, Turkey. I know that everybody is convinced that this is a normal occurrence at high altitudes, but it is not supposed to be during the hottest year ever.

Skiing in Colorado on the 4th of July

June 29, 2019 by Robert

Arapahoe Basin Ski Area in Summit County formally announced Thursday afternoon that the ski area will be open for skiing and riding Thursday, July 4.

Don't you remember what the experts' said? "You should sell your ski resorts because there will be no more snows." I clearly remember that for both Australia and the United States.

Then all the way to Europe, they are getting this massive hail. This make sense though, due to volcanic ash nucleation, changes in the jet streams and faster updrafts.

Volcanoes cooling our planet

June 29, 2019 by Robert

Particulates ejected to altitudes above 32,800 feet (10 km) have a direct cooling effect on the planet.

More details about the Grand Solar Minimum and galactic cosmic rays could be found in Climate Revolution e-book. This is a digital publication so you can just click the hyperlinked texts, and you will be redirected to different sites of related stories.

Climate Revolution

The Grand Solar Minimum

Understand - Prepare - Adapt – Thrive

How the Sun will Affect Society, Economy and Food Prices

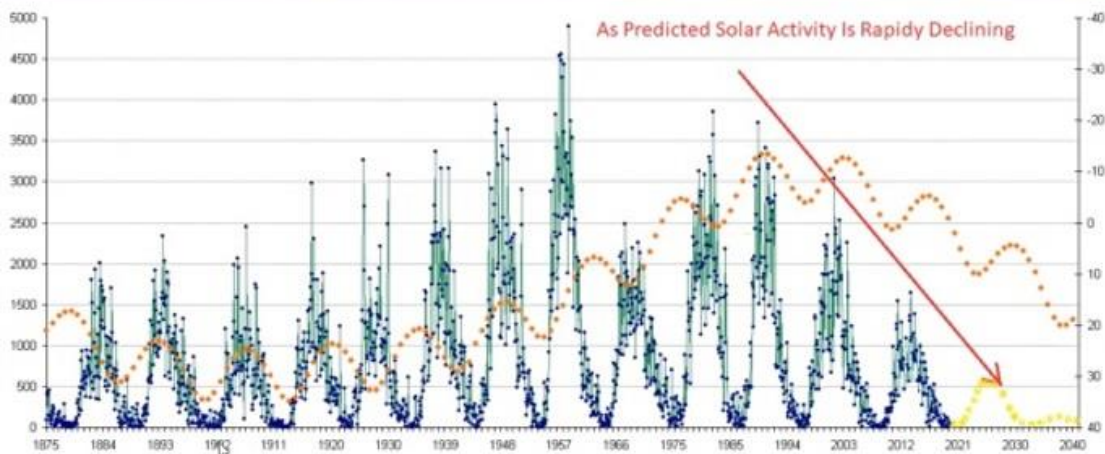

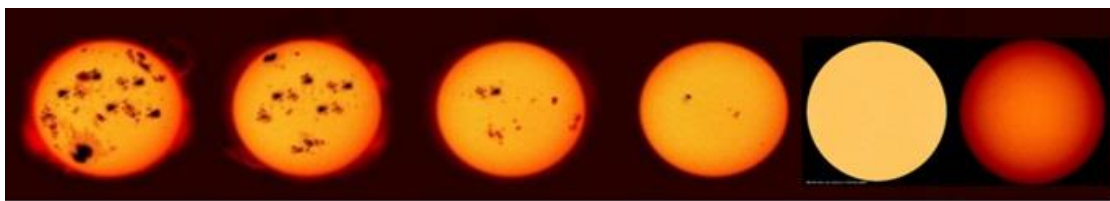

By David DuByne, Bill & Richard Porter

These coming years are going to be more challenging, and you will be needing some survival skills in order to survive. First, you should learn to grow your own food, and then practice growing indoors because in the future, there will be cooler temperatures, more hail, and more absurd rainfalls. Like I said, this is due to the nucleation of the increased volcanic ash.

We are at the beginning of the cusp of the Grand Solar Minimum. The end of this event does not even occur until 2032-2035 and we are already getting these heavy eruptions already. Therefore, I am encouraging you to learn how to grow your own food, and more importantly how to protect plants from the elements.

Solutions to these impending problems must be talked about because I do not have any mass-scale solution except turning defunct shopping malls or parking garages into agricultural zones or improving indoor vertical agriculture using mine shafts and caves.

Thanks for reading, I hope you got something out of the article. If you would like more content like this, I produce the tri-weekly Mini Ice Age Conversations podcast, 30 minutes of in-depth analysis on the GSM you can take on the go through out your day.

Climate Revolution is a 'must read' for the understanding of our Sun driven climate as we progress deeper into the new Eddy Grand Solar Minimum. Weather extremes leading to Global food scarcity and high food prices are here now, and this book describes the expected changes, how to survive & thrive during future challenging times with practical preparations.
