

# Foot of Summer Snow in BC, Hurricane Drought & Crypto Nations

Snow will be a thing of the past, *except* for this massive summer snow in British Columbia. This has happened twice now in British Columbia, and once in Alberta. That makes it three times, that it snowed in Canada during summer.

Tuesday, August 20th 2019, 8:30 am - [Winter rudely interrupted summer](#) in the west over the weekend and a round of soggy weather now follows.

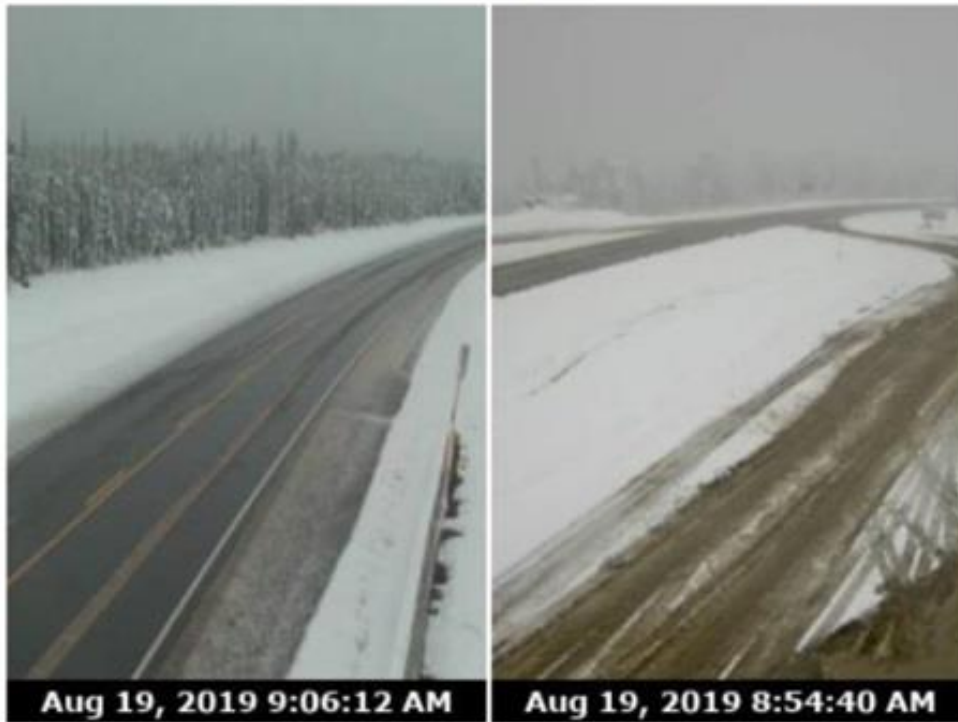

Has Summer 2019 not been up to your standards as far as warmth and sunshine go? Here's a sight that might make you appreciate it a bit more.

Look at this headline: “Unseasonable snow forces campers out of northern B.C. provincial park.” Who would have thought of that in the warmest year ever? These images are on Highway 97, near Fort Nelson.

**KAMLOOPS MATTERS**.com

## Unseasonable snow forces campers out of northern B.C. provincial park

*Highway 97 near Fort Nelson, Steamboat Hill (left) and Slikanni Chief, are covered in snow during unusual weather patterns in the middle of August 2019 (via Drive B.C./Kyle Balzer)*

They usually get a half centimeter, but now it is 35 centimeters. That is over a foot of mid-August summer snow and 70X the norm, which is considered rare and unseasonable, catching everybody off guard. These same events catching people off guard from unusual and unseasonable weather, is seen again and again around the globe. I thought we had superb forecasting.

**KAMLOOPS MATTERS**.com

## Unseasonable snow forces campers out of northern B.C. provincial park

A blast of unseasonable, snowy weather on the weekend **forced the closure of one provincial park in northern British Columbia** and prompted a recommendation to stay away from two others, but conditions are expected to ease soon.

A storm brought as much as 35 centimetres of snow to the Fort Nelson and Muncho Lake Park-Stone Mountain Park regions on the weekend.

B.C. snows more like the middle of January, but it is the middle of August.

*Heavy snow in Tatogga, B.C. on Sunday, August 18. Courtesy: [Kyle Wiebe](#)*

This is a multi-day event that occurred on the 17<sup>th</sup>, 18<sup>th</sup>, and 19<sup>th</sup>.

Highway 97 at Steamboat Hill west of Fort Nelson  
BC is now covered in snow!!

Remember, it was said that Canada is heating up three times faster than the rest of the world, as predicted by the global warming community.

On the same line of unusual forecasts, we were told that because of heating oceans and all the climate change, we would have not only more powerful hurricanes, but a longer hurricane season. NOAA predicted this, but the 2019 hurricane season has been rather quiet. There is one hurricane, Barry, and that is it. But you should not *worry*, midseason hurricane formations are definitely going to happen somewhere in the future because they have to get their forecast.

## Updated VA Hurricane Forecast: NOAA Expects More Storms In 2019

In this week's update, NOAA weather researchers now believe there will be more Atlantic hurricanes this year than previously expected.

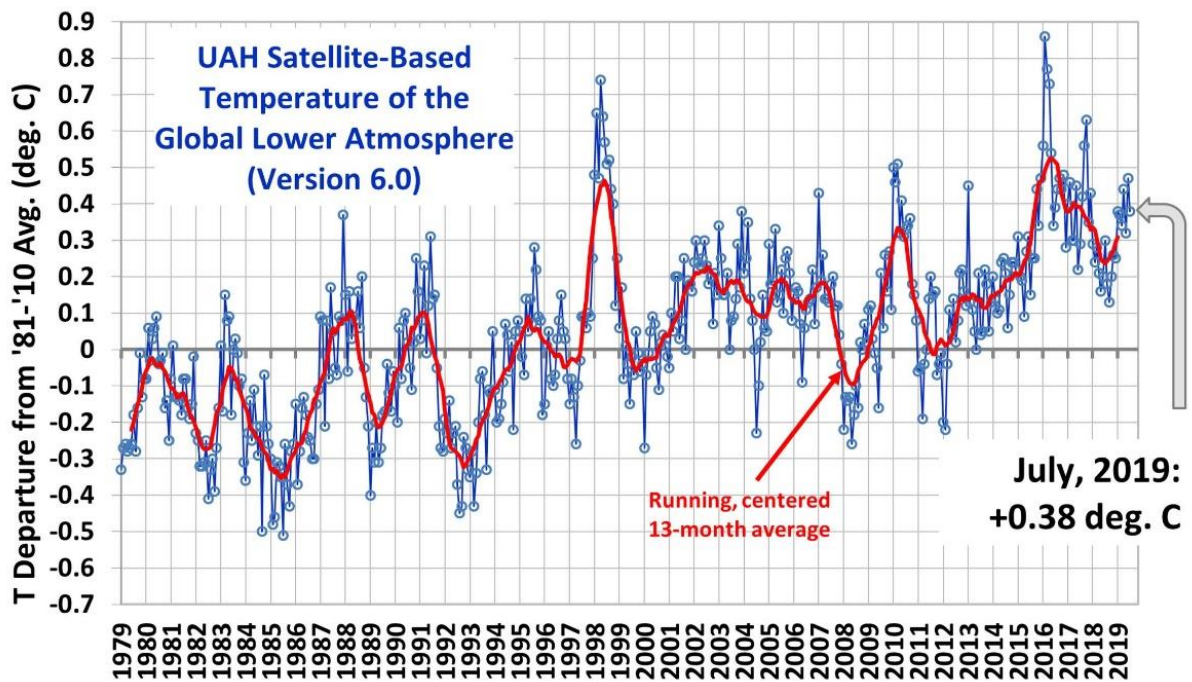

By Deb Belt, Patch Staff  
Aug 9, 2019 12:32 pm ET

And did you know that NOAA readjusted their numbers? How can they do that after the event? It is a forecast; it is supposed to happen before an event.

Anyway, they put the causation down to strong wind shear and dry dusty air from Africa. This is the point where we should be questioning all these experts who have told us, for the last couple of years, that we would have more hurricanes, and then last year as well as this year, hurricane has been very minimal.

Climate Alarmists keep on blaming the heating oceans for every event on the planet, but if you look at this data, the temperature is dropping.

## The hurricane season has been rather quiet. Will it last?

If you think it's been an unusually quiet hurricane season, you're right: The last time we went from July 15 through Aug. 19 with no named storms in the Atlantic was 1982, according to Colorado State University meteorologist Phil Klotzbach.

- The cause of the calm season so far is a combination of strong wind shear and dry, dusty air.
- The only hurricane to form this year in the Atlantic was Barry.

Massive transitions are happening around us, and I hope you can see the signs, not only in the financial media but in the mainstream media as well. Everything is heading into a disarray, trade wars, and trade disputes; and these are all planned as a distraction and a transition to cryptocurrency. The new form of monetary system for our planet in conjunction with our current fiat as we march forward until the full collapse is another sign.

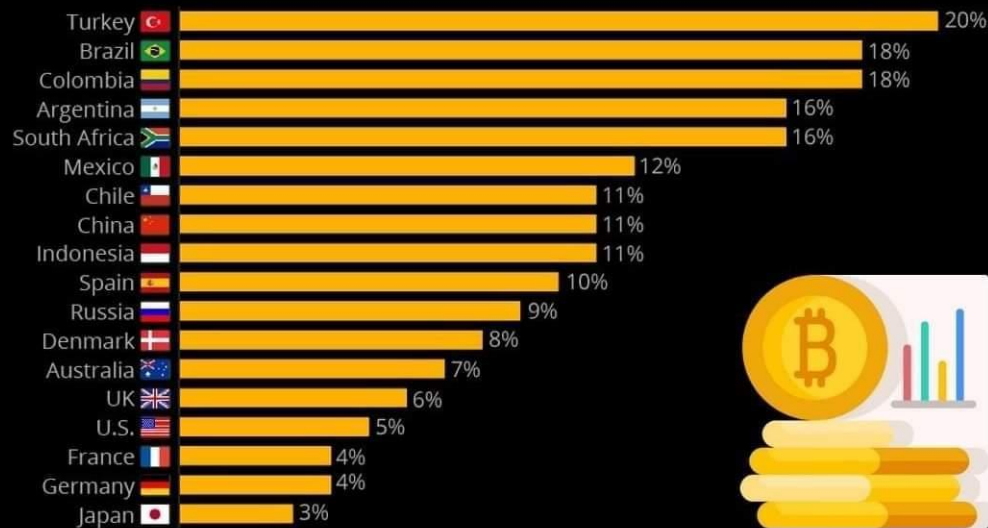

Speaking of which, who is using crypto right now? As shown in this chart, Turkey is right at the top, then Brazil, followed by Colombia, Argentina and South Africa. At the very bottom, the least uptake users are Japan, Germany, France, the US, and the UK. But remember that every society revolves around food. The higher the food prices go, the more the economy is going to contract, and obviously, they know already that it is going to contract to the point of a reset.

# WHO USES CRYPTO

BY RYPTOEXPLORER

## How Common Are Crypto Currencies Around the World?

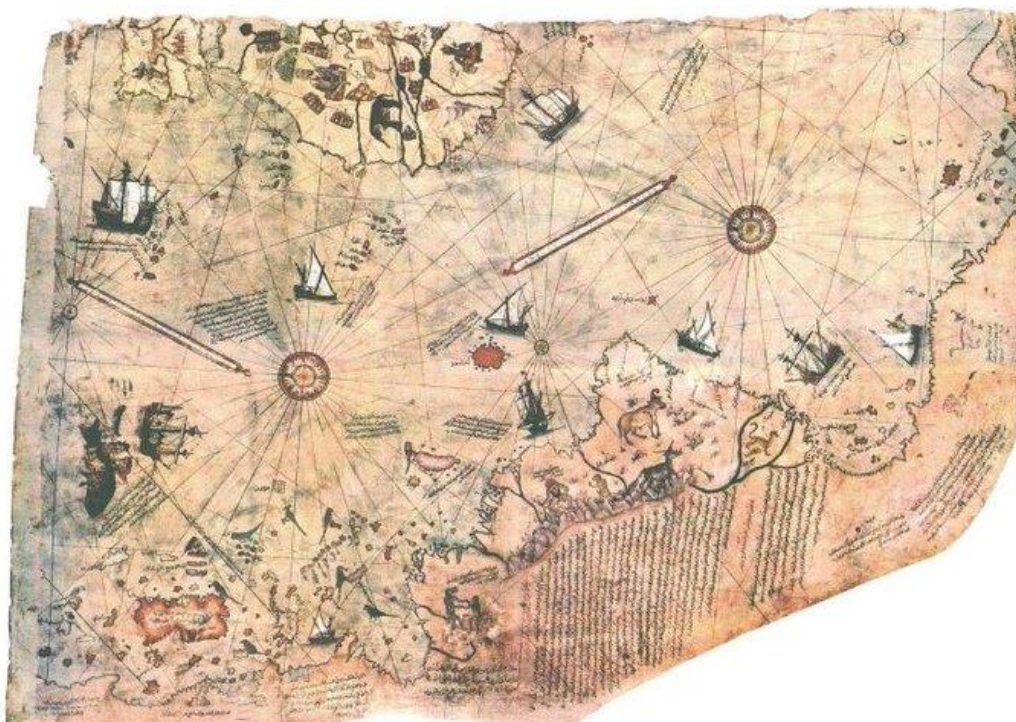

Share of respondents who said that they used or owned crypto currencies

Selected countries, around 1,000 respondents per country surveyed in 2019

Meanwhile, this is the Piri Reis map showing catastrophism. We are definitely on a heavier and more powerful cycle than a 400-year Grand Solar Minimum, so I encourage you to do some of your own research.

Now notice the timing on this, “Plans to cut excessive calorie consumption unveiled.” I did an earlier article about this but apparently, I missed some areas. This was pointed out by one of my subscribers saying that the UK government had also put out through the *Public Health England*, that they want to reduce 20% of calories in popular foods by 2024. This would have been impressive, until you start to match events up.

From: [Public Health England](#)

## Plans to cut excess calorie consumption unveiled

Steps to reduce 20% of calories in popular foods by 2024 announced to tackle childhood obesity.

Major steps to cut people’s excessive calorie intake have been unveiled by Public Health England (PHE), as part of the government’s strategy to cut childhood and adult obesity.

In 2021-2024, as shown in Valentina Sarkova’s work, Double Dynamo in the Sun, we will start to see global food insecurity. If we follow the magnetic cancelling waves, the wider those waves get, the more exceptionally out of sync our weather becomes and growing seasons will be affected. If you have not noticed yet, the timeline matches.

The shift of our global weather patterns are set to amplify 2x from July-Dec 2017, and from 2018-2019 a 4x shift, with another jump up as the spread widens to 6x in 2019. (I explain this in detail on pages 38-41)

So, in 2023 and 2024, food is going to be incredibly expensive and harder to get. It's interesting, that now, the UK government is so concerned for your health, and they are trying to give you simple tips of how many calories to consume through the day: 400 calories in the morning, 600 for lunch, and 600 for dinner.

## Plans to cut excess calorie consumption unveiled

Steps to reduce 20% of calories in popular foods by 2024 announced to tackle childhood obesity.

The latest One You campaign aims to support people to be more calorie-aware when they are out and about with its [simple tip 400-600-600](#). Aim for 400 calories at breakfast, and 600 for lunch and dinner. Major high street brands are partnering with PHE on the campaign, signposting to meals that meet the 400-600-600 tip. Total daily calorie intake recommendations remain at 2,000 for women and 2,500 for men.

This is indeed, in time for the Grand Solar Minimum, where everything will be revolving around food.

### THE SUN DEFINES THE CLIMATE

*Habibullo Abdussamatov, Dr. Sc.*

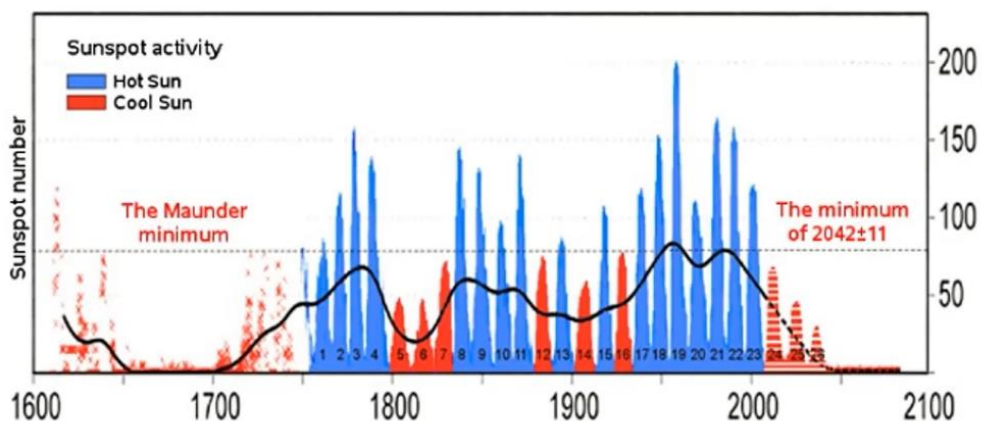

Fig. 3. Variation in the TSI drawing on the data reconstruction of Lean, J.L. (2000) and Wang Y. - M., Lean J.L., Sheeley N.R. (2005) up to 1978, sunspot activity of the Sun from 1611, and changes forecast by us after 2008 (dotted lines).

Thanks for reading, I hope you got something out of the article. If you would like more content like this, I produce the tri-weekly Mini Ice Age Conversations podcast, 30 minutes of in-depth analysis on the GSM you can take on the go throughout your day.

Climate Revolution is a 'must read' for the understanding of our Sun driven climate, as we progress deeper into the new Eddy Grand Solar Minimum. Weather extremes leading to Global food scarcity and high food prices are here now, and this book describes the expected changes, how to survive & thrive during future challenging times, including practical preparations.
