

## No Insurance & UK Food Rationing Odds

The issue about Brexit is a warning that we are heading straight to Grand Solar Minimum/Magnetic Pole Reversal and this news headline is a confirmation: "BBC Breakfast talking about the potential for food shortages and the mechanisms in place to avoid it."

This is about giving 12 to 1 odds of food rationing in the UK; and is officially announced this year, 2019. Sounds interesting, in addition to the talk about increases in security in a two-month time frame. So, if the financial system comes unwound, that would explain gargantuan changes in the forecast for gold and crypto currencies.

**BBC Breakfast are talking about the potential for food shortages and the mechanisms in place to avoid it**

This is where we are, our state broadcaster is actively discussing the possibilities of food shortages in a first world country. Paddy Power are offering 12/1 odds on food rationing being officially announced this year and I have a suspicion that over the next 2 months we're going to see news pieces about increases in security (private firms or police, take your pick) at supermarkets.

I could not let this story pass, so I dug through and came across this news on Christmas Day of 2018: “Revealed: New calorie limits on every common food to reduce obesity.” Those last two words should be changed to ‘lack of food for everybody in the country because of supply disruptions’. It even included a ‘detailed cap for ready meals’, which means the suggested limit of 554-calorie ready meals. That is about three-quarters less compared to the 2,000- or 2,200-calorie ready meals that are sold today, and this is what they are trying to put out as a new standard. I think this is either to condition your brain to get used to lesser calorie intake, or a straight-up mandate that you have to cut your consumption by  $\frac{3}{4}$ .

**The Telegraph** 25 DECEMBER 2018

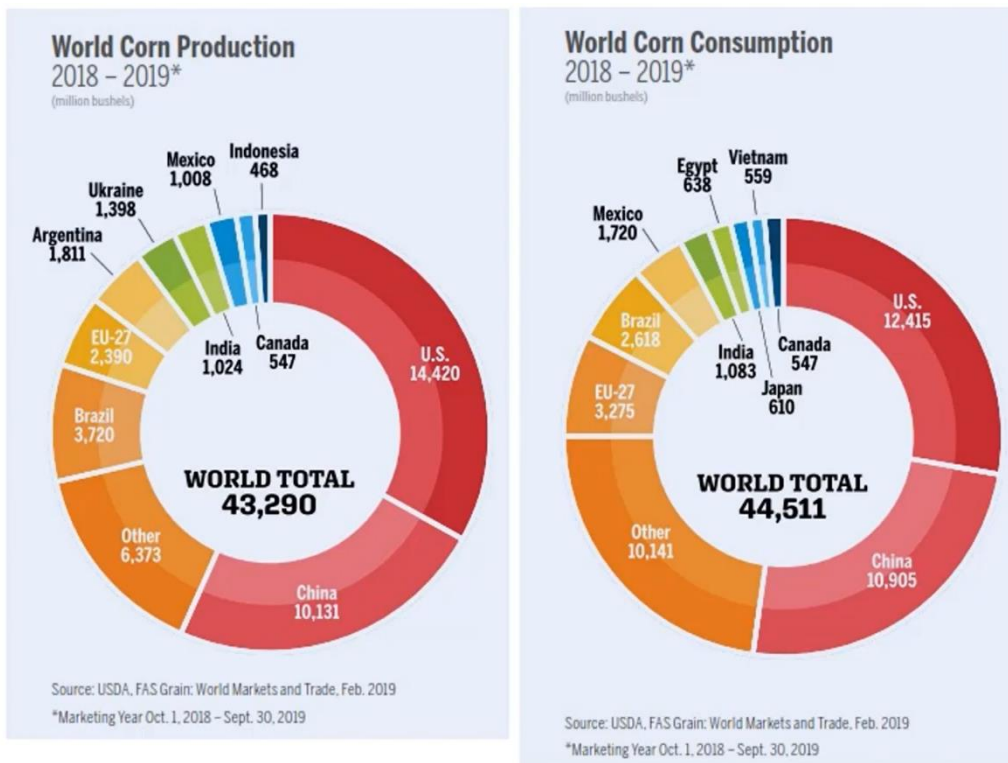

## Revealed: The new calorie limits on every common food to reduce obesity

Draft proposals seen by The Telegraph set out detailed caps for ready meals, sandwiches and even portions of vegetables served across the country.

The plans, drawn up by Public Health England (PHE), suggest a limit of 544 calories for any convenience meal - far below many of those sold today.

Whatever is happening, it is very strange that all this is occurring in the same year, and that we are now observing reductions in American, as well as in Chinese agricultural production.

This, among other reasons, is why the intensifying Grand Solar Minimum is a problem for society. Climate change is making some homes un-insurable, and this will boil down to bankruptcies, especially in the farming industries. Insurance is no longer available because of insurers inability to pay out, due to a substantial / tidal wave number of claims.

"Climate change" Making some homes un-insurable. "It's a problem for society"

**'It's a problem for society': Climate change is making some homes u...**

Climate change has fundamentally changed the nature of the risk for homeowners and insurance companies alike, Peter Armstrong writes.

cbc.ca

So, at what point do we have a roll over in our society with no financial stability because our Sun is turning our climate ferocious, making us, *homo sapiens*, unable to keep our societies intact on this planet?

Ned Nikolov chimed in and said, "I think we are headed towards a prolonged 50-70 year period of cooling. The 'Greenhouse' theory of Climate Change will be in the Museum of Irreproachable Science results." I agree with this, and with global temperatures cooling, I cannot help but wonder how they are going to switch the narrative. I am not the only one wondering about this thing going forward

**Ned Nikolov, Ph.D.**

@NikolovScience

Replying to @S\_Beasley

I think we are headed towards a prolong 50-70 year period of COOLING...

The "Greenhouse" theory of #ClimateChange will be shelved at the Museum of Irreproachable Science Results within the next 25-30 years, and its silliness will be a topic of study by social scientists.. 😊

Are we finally passing the Galactic Cross? Is there something really tremendous upon our doorstep making the governments behave the way they are now? This reckless spending, and the way they are driving our societies and cultures into the ground are just a few examples.

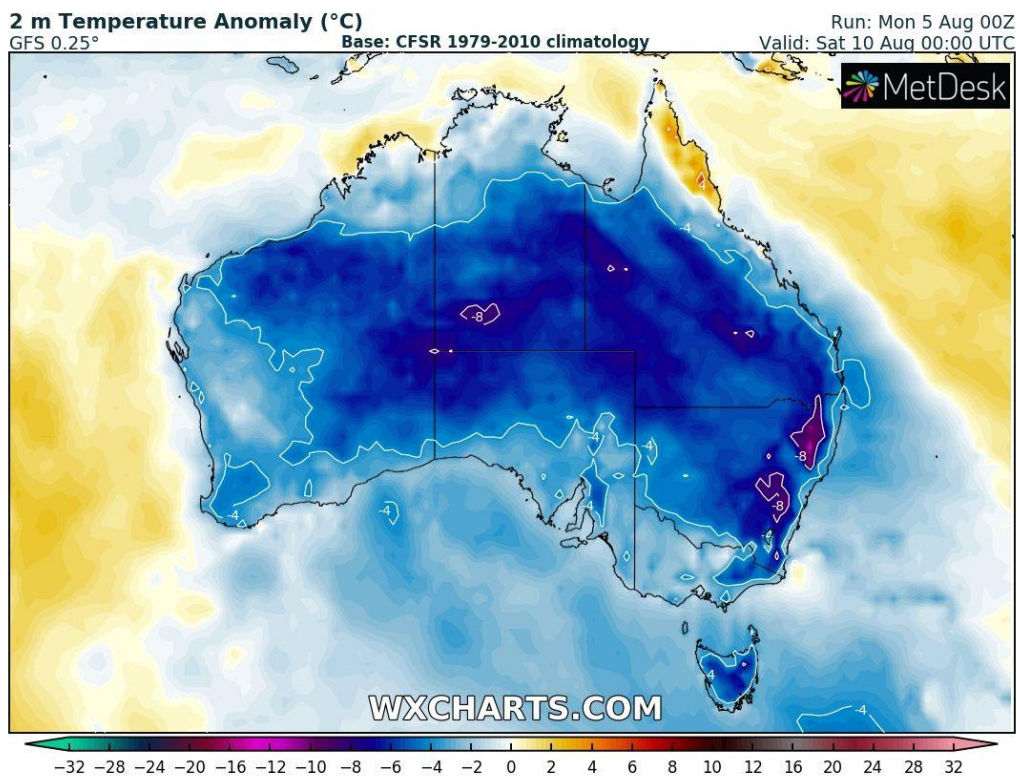

Look through some of these images I took in older Croatian cathedrals to understand what I mean. If you invert some of these images, they look the same.

Perhaps these have hidden messages that need to be decoded.

Because our weather has become haywire. Look at this example of ferocious weather an Antarctic front in Australia in spring.

But one of my favorites is this video that has been circulating around Twitter. Apparently, a little bit south and west of Sydney, kangaroos are bouncing around in the snow.

 **Massimo** @Rainmaker1973 · Aug 12  
Two things you'd never associate together collided in the south-west of Sydney when onlookers saw kangaroos bouncing around in the snow on August 11. Stephen Grenfell filmed the unusual sight near Goulburn, south-west of Sydney [buff.ly/2H2h4BU](https://buff.ly/2H2h4BU)

More images of this can be seen around the web, and this is, probably, four times as many kangaroos scooting along through the fence.

This one here is like an Olympic kangaroo bounding over that fence, it jumped about 10-12 feet into the air. I just hope it will not slip on that snow. The thing is, this has not been seen for decades across so many locations.

This whole idea of warming oceans causing more snowfall is ridiculous. Because why did it take 2 decades before there was enough heating in the ocean to make it snow again? That is a cycle for me. If it has not snowed in decades, and then it snows again, it means it is following a cycle, not warming oceans.

If you look at the cosmic ray density and then at Henrik Svensmark's work, you get the correlation that more cosmic rays equal more clouds, which by extension, means more snowfall, more rain, and more hail. Especially when these cloud layers bunch on each other as jet streams move out of flow. This will cause the amount of cloud cover to double in certain areas, bringing unusual weather with record precipitation.

I talked about some of the narrative switches in my presentation, Winter is Coming. This 1-hour-and-10-minute presentation, consisting of 112 slides, will walk you through the deception, the supposed narrative, and what the plans are, as we see these events unfold with timelines from here to 2030.

Climate Revolution is a 'must read' for the understanding of our Sun driven climate as we progress deeper into the new Eddy Grand Solar Minimum. Weather extremes leading to Global food scarcity and high food prices are here now, and this book describes the expected changes, how to survive & thrive during future challenging times, including practical preparations.
