

Unusual Snows in Australia and It's Not the Warming Oceans

Australia hit by Antarctic front in the middle of August, and so the towns received their first snow in decades. This caused regions 90 minutes away from Sydney to experience extremely rare snowfalls over the weekend.

AUSTRALIA HIT BY ANTARCTIC FRONT WITH TOWNS RECEIVING THEIR FIRST SNOW IN DECADES

AUGUST 12, 2019 CAP ALLON

Regions just 90 minutes from Sydney received [extremely rare snow over the weekend](#), as an intense cold front released from the Antarctic pushed north past Tasmania.

Is this the so-called 'end' of snow?

Also, Paul Fletcher had put out an image with a comment from pilots saying that they have never seen this much snow on the range before.

This was the same time where these kangaroos, in a viral video, were seen jumping in heavy snow and over the fences in Australia.

Western Sydney - HIE

RT @stephengrenfel1: Not something you see every day in Australia. Kangaroos in the snow. #Wildoz #Kangaroos #Snow

♥ 19 8:41 AM - Aug 12, 2019

Even then, a lot of people had been saying that it had to be just a dusting because the ski season had not started yet. But according to *Snowy Hydro*, Spencer's Creek has a new record for natural snow depth measurements. Additionally, prior to 2019, there were only two other events of snow accumulations of 70 centimeters, or more, dating back to 1954. But apparently, the event from last week alone had piled up 77 centimeters of snow.

For those of you in the States, 2.54 centimeters equal one inch.

OFFICIAL MEASUREMENTS

SNOWY Hydro have been measuring weekly **natural snow depths** at three locations the Snowy Mountains of NSW since the 1950's. Their highest measuring site is at Spencers Creek (1,830m elevation) near Charlotte Pass.

THE latest readings have been impressive. Record-breaking, in fact ...

ACCORDING to **Elders weather**:

The natural snow depth at Spencers Creek was 202.7cm this week. **This is the earliest date for a depth of two metres to be measured at Spencers Creek in 15 years.**

It's also an increase of 77.5cm from last week and, impressively, the third weekly increase of more than 70cm so far this season. **This is a new record for Spencers Creek. Prior to 2019, there had only ever been two weekly depth increases 70cm or more in any one season, with data available back to 1954.**

While there have been some long periods without any significant snow this season, when it has snowed, **it's been exceptional in a historical context.**

Elders Weather

Then just in time, minimalist of goodbye snow articles popped into my timeline. This is a great site about Climatism that you must visit.

Windy and 6 others Retweeted a Tweet you were mentioned in

❄️ SNOW will become "A very rare/exciting event. Children aren't going to know what snow is." – Dr. Viner (2000)

❄️ "Goodbye winter. Never again snow?" Spiegel (2000)

❄️ "...decrease heavy snowstorms" IPCC (2001)

❄️ "End of Snow?" NYTimes (2014) climatism.blog/2019/08/17/end via @JWSpry

This news on 'End of Snow' update: Natural snow depth in Australia the highest in two decades; you must remember what the experts told us from the Climate Research Unit, Dr. David Viner. He said that snowfall will become a very rare and an exciting event. He also added, "Children just aren't going to know what snow is."

Al Gore repeated that very same statement again and again. Other authors like Spiegel also said, "Goodbye winter. Never again snow?" And even the IPCC quoted that "Milder winter temperatures will decrease heavy snowstorms."

Now, however, the corporate media & IPCC flipped this narrative and said that “Warming oceans will cause extremely heavy snowstorms.” How did that full reversal from what we have been told for 20 years happened?

Can they just change the narrative just because their previous prediction did not pan out?

‘END OF SNOW’ UPDATE : Natural Snow Depth In Australia The Highest In Two Decades

SNOWFALL will become “A very rare and exciting event...

Children just aren’t going to know what snow is.”

Dr David Viner – Senior scientist, climatic research unit (CRU)

“Good bye winter. Never again snow?” – Spiegel (2000)

“Milder winter temperatures will decrease heavy snowstorms” – IPCC (2001)

“End of Snow?” – NYTimes (2014)

I am sure you still remember this famous headline, “Snowfalls are now just a thing of the past.”

Snowfall will become “A very rare and exciting event...

Children just aren’t going to know what snow is.”

Dr David Viner – Senior scientist, climatic research unit (CRU)

Snowfalls are now just a thing of the past

BY CHARLES ONIANS Monday 20 March 2000

Britain's winter ends tomorrow with further indications of a striking environmental change: snow is starting to disappear from our lives.

Sledges, snowmen, snowballs and the excitement of waking to find that the stuff has settled outside are all a rapidly diminishing part of Britain's culture, as warmer winters - which scientists are attributing to global climate change - produce not only fewer white Christmases, but fewer white Januaries and Februaries.

Let me run you through its history here. Climate Change 2001, during the IPCC Third Assessment Report, it was said that milder winter temperatures will decrease heavy snowstorms. Maybe except when there are heavy snowstorms, because they can just change the narrative.

IPCC Third Assessment Report - Climate Change 2001 - Complete online version

This website contains the full text and graphics from the three working group contributions to "Climate Change 2001" and the Synthesis Report. It was published to the web by GRID-Arendal.

Milder winter temperatures will decrease heavy snowstorms

IPCC – Intergovernmental Panel on Climate Change

The 2003 report from CSIRO also said that experts claimed that the average annual duration of snow cover decreases between 5 and 48 days, and maximum snow depths are going to decrease between 10 – 40%.

A 2003 CSIRO report, part-funded by the ski industry, found that resorts could lose a quarter of their snow by 2020 ...

Climate change impacts on snow in Victoria

CSIRO Research Publications Repository – Climate change impacts on snow in Victoria

By 2020, the average annual duration of snow-cover decreases by between five and 48 days; maximum snow depths are reduced and tend to occur earlier in the year, and the total area covered in snow shrinks by 10-40%

Another story from *The Australian* in 2012 also told us, enjoy snow now... by 2020 it'll be gone. It is now 2019, and in just a couple months, it will be 2020, and they are receiving incredible amounts of snow in Australia. So, I guess the experts in Australia are not 'so' expert after all.

ENVIRONMENTAL researchers say the end of Australia's ski culture is in sight, despite Victoria and NSW experiencing one of their best snow seasons in almost a decade.

People were still shredding up powder last weekend at some of Australia's top ski resorts, but Griffith associate professor Catherine Pickering says snow is rapidly disappearing because of global warming and by 2020 Australia may not have any left.

Then what happened? Maybe 2019 is an exception because that snow outside is what global warming looks like? Please notice how they change the narrative. Since the 'no more snowfall' did not happen, this has to be due to warming oceans.

“That snow outside is what global warming looks like”

LIFE Inside The Global Warming Bubble | Climatism

But if you look at charts just like this, the 1998 heat spike should have caused an enormous amount of snow in some places too, should they not? The thing is, that did not happen, so perhaps, warming ocean is not the cause.

Now, you understand why the global warming petition has been signed by more than 31,000 American scientists, stating, there is no convincing scientific evidence that human release of carbon dioxide, methane or other greenhouse gases is causing disruption of the Earth's climate. So much for the 97%.

Global Warming Petition Project

31,487 American scientists have signed this petition, including 9,029 with PhDs

Petition

We urge the United States government to reject the global warming agreement that was written in Kyoto, Japan in December, 1997, and any other similar proposals. The proposed limits on greenhouse gases would harm the environment, hinder the advance of science and technology, and damage the health and welfare of mankind.

There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth.

Climate Revolution is a 'must read' for the understanding of our Sun driven climate as we progress deeper into the new Eddy Grand Solar Minimum. Weather extremes leading to Global food scarcity and high food prices are here now, and this book describes the expected changes, how to survive & thrive during future challenging times, including practical preparations.
